ACCESS SERVICES PURCHASE ORDER TERMS AND CONDITIONS FOR IT & PROFESSIONAL SERVICES

1. **Scope of Work.** Seller shall perform services, submit deliverables, and complete all work ("**Services**") within timeframes set forth in either the attached Seller's quote/proposal (with all varying or conflicting terms expressly excluded) or Access Services Scope of Work.
2. **Compensation.** Seller's compensation shall not exceed the total price set forth in this Purchase Order.
3. **Standard of Performance.** Seller shall perform and require its subcontractors to perform the Services hereunder in accordance with professional standards of skill, care, and diligence adhered to by firms recognized for their expertise, experience, and knowledge in performing services of a similar nature.
4. **Licenses & Certifications.** Seller warrants and represents to Access that Seller possesses all necessary expertise, licenses, and certifications required for the performance of Services.
5. **Status.** Seller acknowledges that it is an independent contractor. Neither Seller nor any party contracting with Seller or employed by Seller shall be deemed an agent or employee of Access.
6. **Intellectual Property.** Any inventions, materials, plans, reports, software codes or scripts, copyrightable works, patents, work product, or other information (collectively, "IP") (**collectively, "IP"**) created by Seller in performance of work hereunder shall be Access's exclusive property unless relinquished by Access in writing. Upon request, Seller shall sign all documents and cooperate with Access to assign or perfect Access's exclusive ownership of said IP.
7. **Records and Audit.** Seller shall maintain all data, records, and receipts relating to its performance hereunder on a generally accepted accounting basis for four (4) years following Access' final payment of the Purchase Order. Upon Access's request, Seller shall open all data, records, and receipts for Access's review at Seller's office or deliver copies of said data and records to Access offices, as Access requests in its sole discretion.
8. **Unauthorized Work.** Seller shall not receive any compensation for the performance of work not required hereunder.
9. **No Assignment.** Seller shall not assign any part of this Purchase Order without Access's prior written approval.
10. **Inspection.** Access reserves the right, in its sole discretion, to inspect and review all Services at any time. Seller shall take immediate corrective action if Access identifies any deficiencies or default in Seller's performance of Services.
11. **Offset.** All claims for money due or to become due from Access shall be subject to deduction or set-off by Access for any counterclaim arising out of this Purchase Order or any other transaction with Seller.
12. **Indemnification.** Seller shall indemnify, defend and hold harmless Access and its directors, officers, employees, agents and representatives against any claim, damage, cost, liability, injury, death, loss of use of property (including Access property), lost profit, royalties, or expense, including without limitation attorney fees, court costs, legal fees, and defense costs (**collectively, "Claim"**) (whether brought by an Access customer, Seller employee, agent, or subcontractor or subcontractor's employee or agent, or any other person or entity) in any action, mediation, arbitration, settlement discussion, suit or proceeding (**collectively, "Proceeding"**) (including a Proceeding for patent infringement or alleged unfair competition) that arises out of or relates to the items furnished by Seller, performance of work described herein, Access' reliance upon or use of data or other information provided by Seller, breach of these Terms & Conditions ("**Terms**"), act or omission committed by Seller, and violation of any laws by Seller. Access may be represented by and actively participate through its own counsel in any such Proceeding if it so desires, and the costs of such representation shall be borne by Seller.

Seller's indemnification shall apply even in event of fault or negligence, whether active or passive, of the party or parties to be indemnified, unless the Claim arises from the sole negligence or willful misconduct of the party or parties to be indemnified. Seller's indemnification shall survive termination of the Purchase Order or final payment hereunder.

This indemnification is in addition to any other rights or remedies which Access may have under the law or these Terms. If any Claim is made against any party that is entitled to be indemnified hereunder, Access may, in its sole discretion, reserve, retain or apply any monies due to Seller under this Purchase Order to resolve said Claim.

PURCHASE ORDER

ACCESS SERVICES PURCHASE ORDER TERMS AND CONDITIONS FOR IT & PROFESSIONAL SERVICES

- 13. Insurance.** Unless Seller is a sole proprietorship, Seller shall maintain workers compensation insurance in accordance with state requirements. Unless otherwise indicated in writing by Access, Seller shall maintain employer liability insurance, general liability insurance, and employment practices liability insurance in the minimum amount of \$1 million per claim. Access reserves the right to require submittal of insurance certificates naming Access as an additional insured. Seller shall maintain professional liability insurance, as requested by Access.
- Without affecting any other right or remedy, Seller hereby releases and waives all right to recover damages against Access (and all right to transfer or subrogate said right) for any claim or loss arising out of or incident to the perils required hereunder to be insured against. The effect of such release and waiver shall not be limited by the amount of insurance carried or any applicable deductible. Seller shall obtain subrogation waiver endorsements from insurance carriers.
- 14. Limited Liability.** Access and its directors, officers, employees, agents and representatives shall not be liable for any Seller incidental or consequential damages, including lost or anticipated profits. In no event shall Access's liability resulting from any loss, claim, or damage ("**Loss**") brought by Seller exceed the price allocable to the goods or services purchased hereunder giving rise to said Loss. Any Proceeding brought by Seller must be commenced within one year after the Loss has accrued.
- 15. Compliance.** Seller shall comply with all federal, state and local laws, rules and regulations that are applicable to the purchase, manufacture, processing and delivery of goods, services, and items purchased hereunder.
- 16. Choice of Law.** This Purchase Order shall be governed and construed under federal law and the internal laws of the State of California, without regard to principles of conflict of law.
- 17. Disputes.** In the event of a dispute between the parties, Access shall make a determination thereof, and Seller shall comply with such determination. Pending final resolution of any dispute, Seller shall continue to diligently perform Services hereunder.
- 18. Termination.** Access may terminate this Purchase Order (or any part hereof) for a force majeure event (earthquake, fire, flood, hurricane, labor dispute, pandemic, severe weather, trade embargo, sanction, and government intervention that is beyond the parties' control) or for its sole convenience at any time. If Access does so, Seller shall immediately stop work and cause its subcontractors, if any, to stop work. Seller shall be paid a reasonable termination charge equal to the percentage of the work performed prior to the notice of termination, plus actual direct costs resulting from termination. No payment shall be made for any work done by Seller or Seller's subcontractors after issuance of the notice of termination, unless Access authorizes otherwise in writing.
- 19. Precedence.** In the event of inconsistency, the following order of precedence shall apply:
- Purchase Order Terms & Conditions
 - Access Services Scope of Work
 - Seller's Quote/Proposal (with all varying or conflicting terms expressly excluded)
 - All other attachments
- 20. Miscellaneous.** Paragraph headings are solely for convenience and are not a part of these Terms. The parties jointly prepared these Terms and shall be construed as such. Time is of the essence for each term and condition contained herein. Seller shall execute all other documents and take any further actions reasonably necessary to perfect the transactions contemplated herein. No failure or delay by Access to exercise any right or privilege conferred hereunder shall constitute a waiver thereof, nor shall any single or partial exercise of any right preclude other or further exercise thereof or of any other right. If any provision or part of this Purchase Order is found to be invalid or unenforceable, only that particular provision or part so found shall be deemed severed from this Purchase Order, and all remaining provisions and parts shall remain in full force and effect. Signatures delivered by electronic means shall be deemed to constitute original signatures, and electronic copies hereof shall be deemed to constitute duplicate originals.

SCOPE OF WORK

Introduction

This document is provided to Access Services for their Customer Service department management in response to the desired capabilities and requirements communicated during the meeting on October 14, 2025.

What is Algent?

Access Services is interested in an **AI Customer Support Agent “Algent”** that shares the existing customer service phone line to answer general inquiries, create service tickets, and handle complaints and compliments. In addition to accessing via phone, the AI agent should be available in-app and via the Access website by text chat and voice communication.

Features Requested

We have documented several different capabilities and features. Our technical team and AI experts have carefully reviewed each requested feature for feasibility. The detailed features to follow are in relation to an AI Customer Support Agent as summarized here.

The agent will capture and confirm callback numbers, classify calls (**general inquiry vs. ticket**), record audio and text transcripts, and adjust its speech speed and tone to sound more natural and accessible. It will be trained on Access LA’s website content and SOPs, with tools to “untrain” outdated information, defer riders to the correct department or WMR app when needed, and log tickets into Access LA’s ticketing and Rider 360 systems, including trip association where possible. When it cannot resolve an issue or senses dissatisfaction, it will escalate to a human with full context and act as a co-pilot to help operators capture complete, actionable tickets.

Key Outcomes

1. Accurate **Dynamics 365 Ticket** creation for internal vetting
2. Early **classification** of interaction type (General Inquiry vs. Ticket Processing).
3. Answer general inquiries about services provided by Access, as provided for the public.
4. Seamless **handoff to a live agent** with full context when escalation is needed.
5. Consistent, multi-lingual (English, Spanish) voice.
6. Available for incoming **Phone Calls**

Phased Approach

We propose sequencing of phased system integration, customization and delivery of the features. You will find our preliminary thoughts and recommendations for your review in the main document.

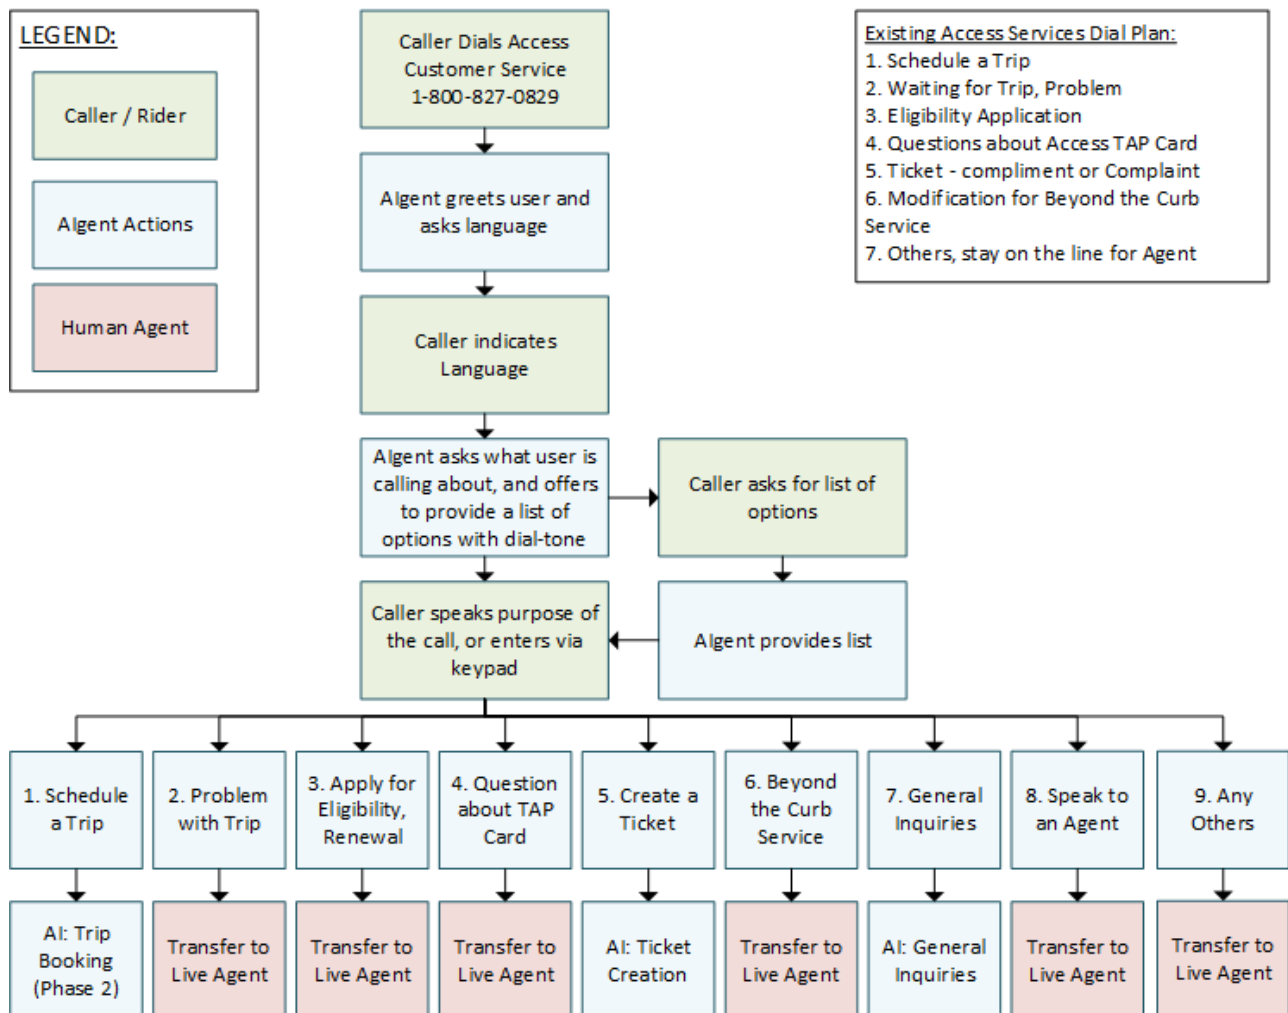

The purpose of establishing a phased approach is to avoid excessive timelines and bring to production features that can yield feedback, fine tuning and user behavior in the adoption of new advances in artificial intelligence.

Algent Telephony Interface

Algent will intercept each incoming call on 1.800.827.0829 number. When user selects Option 7 in the IVR menu, Algent will greet caller as it does today *“Thank you for calling Access Services, please note that all calls are recorded for quality assurance purposes.”* Followed by “Hi, I am your Access virtual agent, and you can talk to me in either English or Spanish, please let me know how I can help you?”

If user selects Option 5, Access Phone System will add an option to ask user if they wish to create a ticket via the efficient AI Agent. If user selects AI Agent, the call is connected to the AI Agent for processing the ticket.

Flow of AI Agent Phone Interaction

Algent integration with Access Phone System

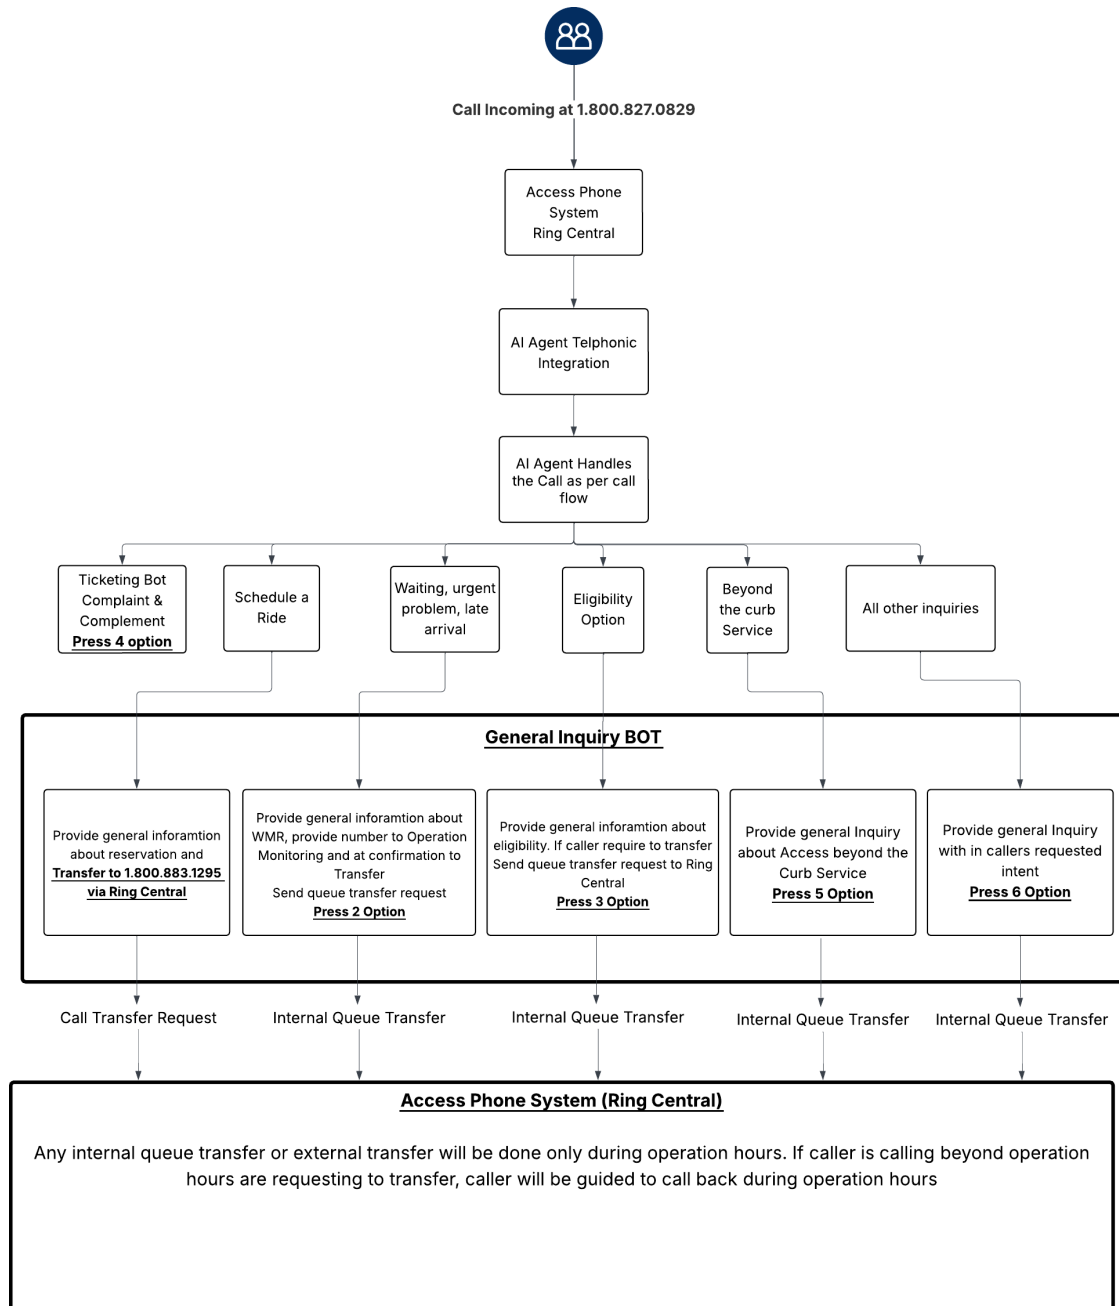

Algent will link with the Access phone system utilizing a third-party tool called **“Live Kit”**. This tool provides an ability to establish SIP channels between telephony PBX and OpenAI tools. It will require extraordinarily little support from the PBX technical team to enable integration. Every incoming call will be directly intercepted by open AI via Live Kit and will be transferred back to phone system internal queues after determining the purpose of the call. Algent will also request a phone system for external transfer in case the caller selects the transfer option.

Limiting Scope via Access phone system

Access will configure the telephony system to manage the roll out of the AI Agents during beta test and post cut over.

In both cases, Algent will transfer the call back to the Access phone system when the caller requests to speak to customer service representative or Algent determines that client is not comfortable speaking with Algent.

Please see below diagram of call flow between Algent and Access phone system.

Documentation

This document includes a detailed overview of the features requested for a successful AI Agent tool, with descriptions and phases identified.

Supporting documentation for the scope and technical considerations are provided for reference in the following Exhibits:

- A. [Exhibit A](#): CRM Ticketing module: is screenshots of Access CRM ticketing and Rider 360 Modules provided as a reference. Exhibit A will identify those screens which the AI ticketing agent will fill or modify.
- B. [Exhibit B](#): Preliminary user stories are written to align the requirements more closely with examples of a user's experience with the AI Agent.
- C. [Exhibit C](#): Preliminary Technical Discussion, Diagrams and Workflows.

Features

1: Screening Inquiry vs Ticket

Customer Service line is a shared Line for Inquiries and Complaints. The AI agent must handle general inquiries, complaints, and compliments received through the same phone line. It shall be capable of classifying each call type during the conversation and handling each accordingly.

The main two classes of calls are

- General inquiry about the services and “how to, what are, where is?” type of calls.
- Complaint & Complement tickets requiring registry and follow-through using R360 CRM Software.
- More detailed requirements of each class provided in later sections.

Response 1: Yes

IT Curves’ AI Agent uses Natural Language Understanding (NLU) models fine-tuned on Access Services’ SOPs and historical transcripts to automatically classify calls into two main categories:

- General Inquiries: “How to,” “Where is,” “When does” type questions.
- Complaints and Compliments: Calls requiring ticket creation and follow-up. AI Agent after identifying that the call is with respect to generating a ticket may notify the rider that it has decided to open a ticket to follow through for his/her case and have the rider confirm its understanding.

This classification happens in real-time, enabling immediate routing and appropriate dialogue handling.

2: User Interface

Rider/User can reach the AI Customer Service Agent “Algent” by the same methods currently available, namely by phone.

Response 2: Yes, Phone

- Phase 1 will support telephony interaction.
 - The caller can dial a number designated by Access Services wherein the Algent will answer the call and commence the conversation should the caller choose Algent.
 - Phase 1 will require work with Access phone system to incorporate intelligent transferring between Access main line to Algent phone line when is desired as per set rules described in later section.
- Future Phases

- may include text (SMS) message, in app chat, web chat or email.
-

3: Get callback number

The AI agent will ask and capture for rider's callback number; should a call fail and the rider request a call back.

Response 3: Yes

- IT Curves' AI Customer Support platform will prompt riders for their callback number at the beginning of every call or chat session. This information will be securely stored within Rider 360 CRM for continuity in case of disconnection.
 - When Caller ID is available, the Agent will confirm the phone number.
 - Call-back feature can be disabled if desired.
-

4: Handling Failed Calls

The AI agent should not initiate a callback on its own if the call fails.

Response 4: Yes

- Agent will log the transcript of any conversation for potential use by the agent
-

5: Recording & Storage

Audio calls should be recorded as an audio waveform in addition to the text version. Waveform will be stored on a separate server, considering the storage space of Rider 360.

Response 5: Yes

- The phone system records each session in dual format, text transcript, and audio (.wav, .mp3). Audio files are securely stored in a dedicated archival server linked via Rider 360, ensuring compliance with data retention policies and scalable storage management.

- AI agent voices are more human-like and less robotic.

Response 6: **Partial Phase 1**

Phase 1:

- Voices will be human-like with a choice of alternative masculine and feminine voices. The voices will not be robotic.
- Some adaptation in speed may be achievable in phase 1

Phase 2 or later

- Research and advancement to improve Adaptive Speech Engine, wherein the AI adjusts speech tempo and tone in real-time based on detected speech rate, pauses, and emotional tone of the caller to ensure natural conversation flow and improved accessibility for all user types.

7: General Inquiries

- The AI Agent will be trained with the Access Website information, Access selected Standard Operating procedures, and other information which may become available from time to time.
- System administrators will have utilities to untrain the AI agent to remove obsolete data from time to time.
- AI agents with reference to the SOPs and other training materials will handle the general information inquiries to completion if possible.

Response 7: **Yes**

- IT Curves will provide an admin page initially configured by IT Curves engineers and Access staff to provide context documents for “training” the AI model or removing/editing to “untrain” the model. Access Staff and IT Curves support from time to time may provide new documents in PDF format (Excel, Word, Power Point) to train or untrain the AI Module.
 - Training material may include Access Services’ SOPs, official website content, and continuously updated FAQs.
-

8: Transfer or Escalation of Call to Live Agent

AI agents will escalate and transfer the call to operators either by recognizing it cannot manage the call, or because the caller wishes to talk to an operator.

Response 8: **Yes**

- An evaluation module will monitor the call and determine if the call should be transferred to a live agent.
 - Calls will be transferred under the following circumstances:
 - Context training has insufficient information to answer.
 - The caller requests a human.
 - Similarly, other indicators will be identified (requests for human, frustration, context).
 - Rider's input is not understandable or irrelevant; rider fails to provide discernible, valid input.
 - Caller is requesting to perform an action not handled by AI Agent
 - The Agent will pass the call to an operator by:
 - Agent will have scripted language to let the rider know that they are transferring the call to a human/live agent.
 - Agent will offer to transfer the call to a human customer service agent.
 - Transcript summary, any progress/form information will be passed to the human agent/supervisor.
 - If no agent is available (such as for after-hours calls)
 - The agent will inform the caller that no agent is available and to call back during business hours.
-

9: Defer Caller to Other Department & Escalation of General Inquiries

Caller is deferred to another department.

- For Token, Fare and other payment data – provide general information and ask to call another number to complete the application.
- For Trip reservation inquiries provide general information and for actual reservation guide them to download WMR App or refer them to reservation number.
- For WMR information provide general information and ask if they wish to have a link to be sent to their cell phone, confirm cell phone number and send a link to IOS /Android stores

Response 9: **Partial**

The AI Agent is configured with smart deferral logic:

Phase 1

- Fare/Token Queries: Provides general information and refers to the payment department phone number.
- Trip Reservations: Explains booking options and directs riders to download or use the WMR App.
- WMR App Guidance: Can identify if a user is not using WMR (check records or ask) and give a rider a short description of WMR app and advantages of using it.

Phase 2

- Confirms caller's mobile number and sends iOS/Android download links via SMS.
-

10: Inquiry - Notes in Rider360

For general inquiry calls, the call data will be annotated in Rider360 with a summary of the general inquiry.

The summary of general inquiry will be annotated in Rider360.

Response 10: **Yes**

IT Curves will integrate the AI Agent's output into Rider360 annotations per the data schema provided by Access Services. This ensures every inquiry and complaint is automatically documented and traceable for auditing.

- See Exhibit A for preliminary work on mapping fields.
-

11: Complaint/Compliment Logging

All complaints and compliments must be logged into the designated ticketing system of Access Services

- The AI agent shall populate mandatory form fields (e.g., rider name, phone number, date, ride ID if available, description, and category) accurately to ensure complete downstream processing.
- Note complaints or compliments are not always from a rider and may be from a public regarding accidents or incidents, this means some complaints or compliments may not have rider ID and may not be associated with a riders records. AI Agent will need to capture callers' data including name and phone number if they are willing to provide.

11: Yes (see Exhibit A)

- The complaint-management module automatically completes all mandatory ticket fields based on caller input and CRM lookups.
- When a rider ID or trip record is unavailable, the AI Agent creates a general complaint entry using caller-provided details and flags the ticket as "Public Incident." This

maintains full data integrity while ensuring non-rider reports are logged properly for follow-up and investigation. See Exhibit A.

12: Tickets Associated with Specific Trip

The AI must attempt to identify and associate each complaint with a specific ride or trip record using trip details (e.g., date, time, pickup/drop-off, driver name, vehicle number).

- Database of trips for previous dates is available in Access CRM and may be searched.
- Data associated with the same date may be involved through WMR API to service providers.
- If the records cannot be identified and searched by rider ID and Date, it may be deferred to a later phase search by human operators. I.e. the AI agent needs to recognize that the search is not successful and take the ticket with as many details as possible.

Response 12: **Yes**

The AI system searches Access CRM and WMR APIs to link complaints with corresponding trip records based on date, rider ID, or trip metadata. If no match is found, the AI Agent flags the ticket as “Ride Association Pending” and passes all collected details for supervisor’s review. This design ensures no complaint is lost and each record is complete for later validation by a human operator. See Exhibit A, B, C.

13: AI Agent Copilot to Human

- The customer support supervisor said that sometimes the tickets taken by operators are hard to process because of inadequate data capture. They asked if the AI agent can co-pilot the human agents:
- When agent receives that call from beginning, the co-pilot guides the agent to operate based on SOP and manage all required fields
- If mid-stream call is passed to human agent, provide her with adequate data and forms as may be filled by then,
- Assist in data inquiry such as search for additional trip or rider data.

Response 13: **Feasible but not advisable in Phase 1**

It will be best to begin working on the AI Co-Pilot once Phase 1 is complete because all the training for the AI Agent and lessons learned can then be applied to the AI Co-pilot.

14: Multi Language Support

The AI Agent supports multiple languages.

- English and Spanish

Response 14: **Yes, Spanish and English in Phase 1**

The AI Agent will be able to communicate in both English and Spanish.

- With additional R&D we anticipate the ability to allow for auto detection of languages spoken and be able to switch between Spanish and English within a single call
 - Future phases can add other languages depending on priorities and complexity
-

15: Admin, Monitoring, Reporting

Tools to monitor and manage the AI Customer Support Agent:

- **Performance Dashboard:** A live view of how the AI is performing. It needs to show the mix of calls (simple questions vs. needing a ticket), how often calls are transferred to a person, and how long calls take.
- **QA Review Tool:** A panel to check the AI's work. It must show transcripts and audio. It should automatically flag calls where the AI was unsure, allowing reviewers to correct the ticket information or add feedback.
- **Audit Trail:** A permanent log that records every system change—who made the change, when, and what was updated.
- **Log Access:** Administrators must be able to easily search, download, and review system logs and specific call audio for troubleshooting or training purposes.

Response 15: **Yes**

IT Curves will deliver a robust suite of admin, monitoring, and reporting tools:

- **Administration & Configuration Panel:** Provides administrators with a single interface to manage all core settings, including:
 - **Configuration Management:** Adjust system settings, deferral rules, escalation logic, and service hour parameters.
 - **Content Management:** Upload, update (“unlearn”), and manage training data, and knowledge base articles, and FAQs.
 - **Language & Voice Settings:** Enable new languages and configure voice models for supported channels.
- **Monitoring & Reporting Capabilities:**
 - **Session Distribution Dashboard:** Tracks real-time session mix (Inquiry / Ticket / Transfer), failure escalations, completion percentage, and average duration.
 - **QA Review Panel:** Displays transcripts, audio, and annotations; flags low-confidence or incomplete tickets; enables reviewers to reclassify or comment

inline.

- **Comprehensive Audit Logging:** Every configuration edit, deployment, or deferral-rule change (who / when / what) is recorded in an immutable log.
- **Operational Log Access:** Administrators can filter and download log streams and select audio recordings for audit or training review.

These features will be available from Phase 1 to ensure immediate oversight and complete administrative control of the AI Agent's performance.

16: Verify Rider

Response 16: **Yes**

- Rider can be verified using information such as their Eligibility Expiry Date, DOB, Name, etc.
 - Verifying Rider can be required or not required depending on the topic of the call
-

17: Restrict Information

Response 17: **Yes**

- Information on the Rider's profile will be restricted from being shared to the rider
 - As directed, some information on the Rider's profile can be shared with the Rider, but only after the Rider's identity is positively confirmed.
-

Phased Implementation/Rollout Consideration

Our experience in AI solution implementation has consistently shown that a phased rollout approach is most effective. We prioritize starting with areas that offer a combination of high cost savings, low implementation complexity, and significant enhancement to the current user experience.

Based on preliminary assumptions, we propose for the purpose of starting a dialog, the following progressive rollout strategy. Before progressing to the next phase, we will analyze whether the prior phase demonstrates successful and reliable results.

Phase 1 (To be determined by Customer)

1. Begin with times when customer support is unavailable
 - a. The customer service phone number could be routed to the AI Agent under specific conditions.
 - i. During peak volume when hold times are longer (removed by customer)
 - ii. Any condition where a customer would not get immediate assistance
2. Maintain the IVR as is and begin with sending to the AI Agent specific types of calls

routed from the IVR.

3. Begin with handling only Customer Inquiries forwarded from the IVR

IT Curves has a fully developed and customizable telephony system that accepts SIP, Socket, call forwarding, and backend integrations to support or handle any method of integration we collectively determine is best.

Phase 2

1. Expand tool to be available during normal business hours
2. Maintain IVR as is and send calls to the Agent for specific types of calls routed from the IVR
3. In addition to Customer Inquiries forwarded by IVR, add support for Complaints and Complement Tickets by forwarding to AI Agent first when the call selects [Press 5]
4. Route a percent of calls to the AI Agent. Include routing as a round robin (1 in 10 calls) and then expand.

Phase 3

1. All calls coming into the Customer Service department at 800-827-0829 will first go to the Agent and the Agent will handle the call or route to the appropriate department.

Cost Proposal & Project Schedule

Dear Procurement Manager,

I am pleased to submit IT Curves' Cost Proposal for the General Information Module and Ticket Processing Module. We are grateful for the opportunity to offer our solutions to meet the needs of Access Services LA.

Enclosed, you will find the Cost Table, Pricing Schedule, and Project Timeline. IT Curves is committed to delivering these modules within a 16-week period.

Thank you for considering our proposal. We are confident that our solutions will meet and exceed Access LA's expectations. We look forward to the chance to collaborate on this important initiative and are happy to provide any additional information or clarifications you may need.

Sincerely,
Jared Gabrilowitz
Sales Manager

<u>Payment Terms</u>	
The following payment milestones are subject to the project being performed by IT Curves for Access LA in relation to General Information System and Ticket Processing System. Milestones are based off of the Work Plan included in IT Curves' initial response. Payments are to be paid in full to IT Curves within 30 days upon receiving each invoice.	
Capital Costs Begin	
Payment Milestone 1 – Notice to Proceed – 30% of One-Time Costs =	\$ 28,980
Payment Milestone 2 – General Information System Alpha Testing – 35% of One-Time Costs =	\$ 33,810
Payment Milestone 3 – Ticket Processing System Alpha Testing – 35% of One-Time Costs =	\$ 33,810
<i>Capital Costs Finished</i>	
Recurring Costs Begin	
Payment Milestone 6 – Full Cutover to IT Curves' System – Year 1 Operating =	\$ 18,900
Payment Milestone 7 – One Year after payment of Milestone 6 – Year 2 Operating Cost	\$ 18,900
Payment Milestone 8 – One Year after payment of Milestone 7 – Year 2 Operating Cost (Option) =	\$ 18,900
<i>Operating Costs for Years 1-3 Finished</i>	
Optional Extension Years Begin	
Payment Milestone 9 – One Year after payment of Milestone 8 – Year 4 Operating Costs (Option) =	\$ 18,900
Payment Milestone 10 – One Year after payment of Milestone 9 – Year 5 Operating Cost (Option) =	\$ 18,900
Contract Total over 5 Years	
	\$ 191,100

Exhibit A

R360 Ticketing System: Human to AI Agent Transformation

This document, **Exhibit A: R360 Ticketing System (Human to AI Agent Transformation)**, details the preliminary analysis and mapping required to transition human-handled R360 support tickets to an AI Agent system.

The core objective is to leverage an AI Agent to autonomously process and populate key fields within the R360 ticketing system based on real-time rider input (primarily via phone).

Preliminary Mapping and Transformation Strategy

A meticulous breakdown of the R360 ticket structure was performed, specifically examining each subsection and its corresponding fields:

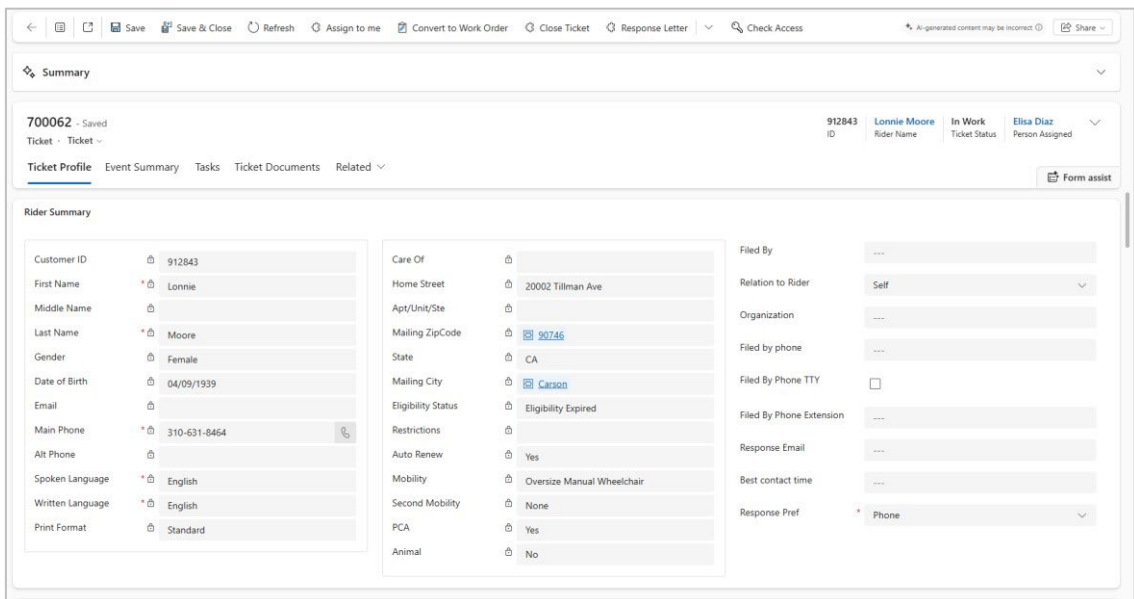

- **AI Agent Applicability:** Each field (e.g., Ticket Summary, Ticket Description, Rider Summary, Ticket Detail) has been assessed, defining which fields the AI Agent will compute and set, which will be set by the CRM-API (often based on rider ID or trip number), and which require no AI action (e.g., Event Summary, Research Info).
- **Data Sourcing:** The process maps the AI Agent's data consumption, which includes generating natural language summaries (Ticket Summary, Description) from conversations and extracting structured data points (Incident Date/Time, Contact Preference, Contract Provider, Trip details). The AI Agent will also leverage the CRM-API for automated lookups (e.g., Rider ID, Trip history, Region).
- **Handoff Process:** The AI Agent's conversational output (Annotations) and the structured data it collects will form the complete ticket. For trip-related issues, the AI Agent will actively consume the **Trip History** data fetched by the CRM-API to accurately identify the relevant trip number, enabling the CRM-API to auto-fill subsequent trip details, ensuring a smooth and accurate transition of data from conversation to record.

Key Insights

The document includes an analysis of ticket volume across various **Work Queues (WQ)** and **Sub Queues (SQ)**, which confirms the primary target areas for the AI Agent are high-volume categories like **Customer Relations - Procedure** (44,040 tickets) and **Customer Relations - Compliment** (38,025 tickets). Sample ticket summaries have been provided for top queues to create precise definitions for the AI Agent's content generation capabilities. This preliminary mapping provides a clear blueprint for the technical development and subsequent smooth transformation and handoff of ticket creation from human agents to the AI Agent.

R360 Tickets Subsections & AI Agent Applicability.

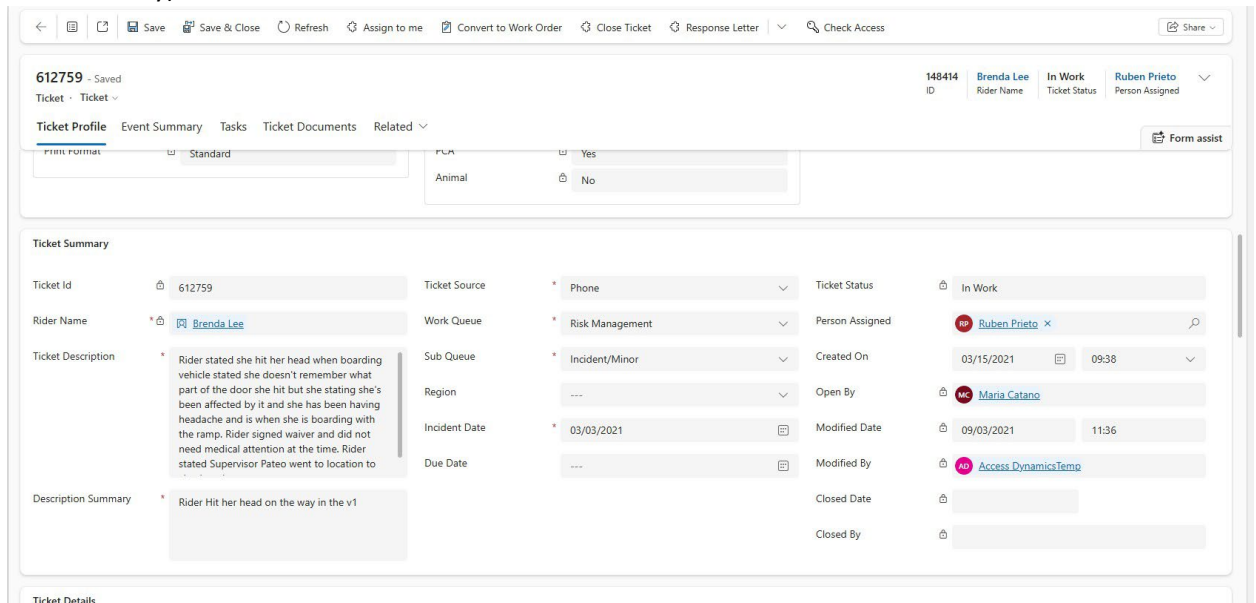

- i. **Ticket Summary:** AI-Agent will compute & set this, e.g. "Rider Hit her head on the way in the v1"
- ii. **Ticket Description:** AI-Agent will compute & set this, e.g. "Rider stated she hit her head when boarding vehicle stated she doesn't remember what part of the door she hit but she stating she's been affected by it and she has been having headache and is when she is boarding with the ramp. Rider signed waiver and did not need medical attention at the time. Rider stated Supervisor Pateo went to location to check on her."
- iii. **Rider Summary:** AI-Agent will compute & set
 - a. rider-id (optional), e.g. "rider-id can be received via DTMF or via voice, CRM-API will populate rest of fields automatically for left two columns.
 - i. Whenever rider id is not available then use AI-Agent set 1 as rider-id
 - b. Last column will be filled by AI-Agent
 - i. If caller is other than rider then AI Agent will provide
 1. Filed By: name of caller
 2. Relation to Rider: plain text
 3. Organization: plain text
 4. Filed by Phone: it will be Yes for phone-based ticketing.
 - ii. Response Email: plain text
 - iii. Best contact time: plain text
 - iv. Response Preference: one option from following (none, email, phone, written)

The screenshot shows the 'Summary' tab of a ticket profile in the R360 system. The ticket number is 700062, saved. The rider's name is Lonnie Moore, ID 912843, with status 'In Work' and assigned to Elsa Diaz. The form is divided into three main sections: Rider Summary, Care Of, and Filed By.

Rider Summary		Care Of		Filed By	
Customer ID	912843	Care Of		Filed By	---
First Name	Lonnie	Home Street	20002 Tillman Ave	Relation to Rider	Self
Middle Name		Apt/Unit/Ste		Organization	---
Last Name	Moore	Mailing ZipCode	90746	Filed by phone	---
Gender	Female	State	CA	Filed By Phone TTY	☐
Date of Birth	04/09/1939	Mailing City	Carson	Filed By Phone Extension	---
Email		Eligibility Status	Eligibility Expired	Response Email	---
Main Phone	310-631-8464	Restrictions		Best contact time	---
Alt Phone		Auto Renew	Yes	Response Pref	Phone
Spoken Language	English	Mobility	Oversize Manual Wheelchair		
Written Language	English	Second Mobility	None		
Print Format	Standard	PCA	Yes		
		Animal	No		

- iv. **Ticket Summary:** AI-Agent will compute/fill following information from rider
- All red asterisk are mandatory fields.
 - Ticket Description: plain text, example is given in below screenshot
 - Ticket Summary: plain text, example is given in below screenshot
 - Ticket Source: "Phone" is selected from dropdown (AI-phone-Agent will always set this 'Phone' in first phase)
 - Work Queue: select item from dropdown, example is given in below screenshot
 - Sub Queue: select item from dropdown, example is given in below screenshot
 - Region: (CRM API will set it auto if rider specified a trip# otherwise it will be empty)
 - Incident Date: set as per caller input
 - Incident Time: set as per caller input (this field visible in next section of GUI)
 - CRM API will auto set following fields (Ticket Status: Open & Created On: Current date & time)
 - Rest of fields will stay empty (person assigned, modified date, modified by, closed date, closed by)

The screenshot shows the 'Ticket Summary' section of the ITCURES application. The form is for ticket ID 612759, saved. The ticket is assigned to Ruben Prieto and is in 'In Work' status. The ticket source is 'Phone', work queue is 'Risk Management', and sub queue is 'Incident/Minor'. The incident date is 03/03/2021. The ticket description is: 'Rider stated she hit her head when boarding vehicle stated she doesn't remember what part of the door she hit but she stating she's been affected by it and she has been having headache and is when she is boarding with the ramp. Rider signed waiver and did not need medical attention at the time. Rider stated Supervisor Pateo went to location to...'. The description summary is: 'Rider Hit her head on the way in the v1'. The form also shows fields for 'Created On' (03/15/2021 09:38), 'Open By' (Maria Catano), 'Modified Date' (09/03/2021 11:36), 'Modified By' (Access Dynamics Team), 'Closed Date', and 'Closed By'.

- v. **Ticket Detail:** AI-Agent will compute/fill following information from rider
- All red asterisk are mandatory fields.
 - Select item from dropdown, example is given in below screenshot, AI Agent will set it as "ASI" if option is not clear.
 - If rider informed about the trip# then CRM-API will overwrite this field with the trip's provider.
 - All other information is optional, Capture & submit as much rider can provide for his/her trip.
 - If rider has specified his past trip clearly then CRM-API will fill rest of the information auto

- ii. If rider cannot specify the past trip then fill below fields with the provided information by rider. (pu address, pu city, do address, do city, trip date, trip requested time, trip schedule time, vehicle arrival, incident time, vehicle#, driver#)
- iii. Badge# is driver number

Ticket Details					
Contract Provider	Southern - GPI	Trip Date	04/20/2021	Requested PU Time	---
PU Address	20700 AVALON BLVD	Trip Type	---	Scheduled PU Time	04/20/2021 15:40
PU City	Carson	Vehicle#	414494	Veh Arrival Time	04/20/2021 15:40
DO Address	20002 TILLMAN AVE	Badge#	13287	Incident Time	16:00
DO City	Carson				

vi. **Event Summary:** No Action for AI-Agent

- a. CRM API will create an auto event only when WQ will be "Risk Management" & SQ will be Any-Item.

Event Summary	
Event Date	04/20/2021 00:00
Event Type	---
Supervisor Present	No
Supervisor Name	---
Event Description	13.HAVE YOU RIDEN WITH THIS DRIVER BEFORE? 14.PREVIOUS ISSUES WITH THIS DRIVER? 15.DESCRPTION OF THE DRIVER? IF OTHER PASSENGER OR INDIVIDUAL:

vii. **People Involved:** No Action for AI-Agent

- a. CRM API will create an auto People only when WQ will be "Risk Management" & SQ will be Any-Item.

viii. **Access Trip Info:** AI-Agent will compute/fill following information from rider.

- a. Compute past trip#
- b. Contract Provider: Select item from dropdown, example is given in below screenshot, AI Agent will set it as "ASI" if option is not clear.
 - i. If rider informed about the trip# then CRM-API will overwrite this field with the trip's provider.
- c. All other information will be filled by CRM via trip number.

- x. **Research Info:** No Action for AI-Agent.
- All fields are Optional at time of ticket creation
 - Supervisor will fill later for research on the ticket.
 - There are two Research sections Left and Center of below screen shot both works same:
 - Employer: can be selected from drop down
 - Position: can be selected from drop down
 - Badge No: Numeric number
 - Operation DB will be called on basis of above selected fields CRM API will get information and will fill First Name, Last Name, Regarding Id.

- d. Ticket Closure: possible values: No Response, Sent Email, Sent Letter, Called Rider.
- e. Verified Concern: possible values: Yes, No, Undetermined, Not Applicable.
- f. Resolution Summary: Summary of Resolution.

Ticket Type	Definition	Example
ADA*	When organizational practices violate the American with Disabilities Act (ADA)	Failure to provide accessible vehicles in fleet. Failure to allow for next day reservations; Failing to schedule trips within 3/4 mile from the nearest bus or rail route
Booking*	Error(s) made by the agent when scheduling a reservation	Wrong time pickup time scheduled, Wrong address scheduled, # of Passengers or mobility device; Error canceling trip; Negotiating trip outside of window
Procedure*	Failure to provide adequate service and/or failure to follow or understand policies and procedures	CSR Speaking to fast; Refusing to confirm reservation; Not allowing enough time for customer to respond; not paying attention or eating during call Driver: Not displaying badge; Refusing to use debit or credit card for payment; Making an unscheduled stop; Unfamiliar with Access policies and procedures; Not assisting customer; Listening to the radio; Not waiting the 5 min dwell time; failure to approach customer; driving techniques: declining to transfer a properly secured comfort animal
Commendation	Positive feedback	Commendations for anyone representing Access, acknowledging great customer service displayed.
Conduct*	Behavior concerns, improper interaction with customer(s)	Rude; yelled; cursed; impatient, etc. Driver threatened to leave me
Eligibility	Concerns w/ the Eligibility Process and Eligibility Center	Disagreements with the evaluation or appeals process
Fare	Disputes regarding the fare quoted or charged	Charged incorrectly for trip; Overcharged (Request Bank Statement) Fare Discrepancy between PU & Return
Late 1*	1-15 minutes late after the 20 minute window	Driver arrived 1-15 minutes after the 20 minute window
Late 2*	16-30 minutes late	Driver arrived 16 to 30 minutes outside the 20 minute window
Late 3*	31-45 minutes outside the 20 minute window	Driver arrived 31-45 minutes after the 20 minute window
Late 4*	46+ Late	Driver arrived more than 46 minutes after the 20 minute window
Lost & Found	Items left behind or lost when traveling with Access	Reports of item(s) left behind in vehicle; When customer does not receive follow-up regarding their Lost and Found item
Phone	Phone service or longer than usual hold time	Unreasonably long hold times; Busy signals; Reservations/Customer Service closed during hours of operations;
Policy	Disagreement with Access Policies and Procedures and customer insist on submitting complaints	Disputes regarding Access Policies and Procedures such as shared rides, carry-on weight/size limits, addresses outside of service area; drivers unable to provide change

Reasonable Modification Request	Denial of a reasonable modification requests	Denial of BTC or RMR approved requests, RMR Review, RMR Determinations & Appeals
Routing*	Route Inefficiency	Trip was routed poorly; Doubled back to previous pick up address; waited for shared-riders' pickup for an unreasonable amount of time
Securement*	Improper securement of customer(s) and or equipment	Wheelchair was not properly secured; Other devices or individuals improperly secured; Lack of seatbelt extensions or use of seatbelt extension when asked
Service*	General Service concerns not related to the categories listed above	Multiple shared rides on PWD trips; Low On-Time Performance (OTP); Violations of other Policies and Procedures
Service Animal*	Challenges when traveling with a Service Animal (SA)	Declining service to a SA; Insufficient space for SA. Comfort of Service Animal (hot floors, sliding mats, etc.)
Suggestion	Recommendations for process improvements	Recommendations to enhance current policies and procedures
Travel Time*	Trips taking longer than the comparable fixed route	Trips exceeding a comparable fixed route
Vehicle*	Defects with the vehicle or vehicle condition	Dirty vehicle; Cosmetic damages to vehicle; Mechanical concerns; Inoperable AC or other equipment

Work Queue	Sub Queue	Ticket Count (One Year)	Sample Tickets Summary To Create Definition for AI Agent
Customer Relations	Procedure	3544	Summary#1: Driver lost control of V1 while reaching in the glove compartment while on freeway. Summary#2: Driver didn't lock brakes of wheelchair when dropping the rider off at the entry door of the facility. Summary#3: Driver didn't get off to approached and she is legally blind. Summary#4: Rider was not PU on time due to driver on lunch. Summary#5: Rider is missing.
Customer Relations	Compliment-Driver	2727	Summary#1: Smile for driver for providing exceptional service & safe driving. Summary#2: Smile for driver Summary#3: Smile for driver, made sure to went over ramp safely with walker. Summary#4: Smile for GPI driver. Summary#5: Smile for CTI driver Elias.

Customer Service	Visitor Request	2698	Summary#1: Please send riders eligibility to RTA, adacert@riversidetransit.com Summary#2: Please send Visitor ELIG to omniada@omnitrans.org Summary#3: visitor pass request for OC Summary#4: Please send eligibility to OCTA accesseligibility@octa.net Summary#5: Rider is requesting a visitor pass for San Bernardino OMNI, omniADA@omnitrans.org.
Customer Service	Rider Incidents	2332	Summary#1: Driver called dispatch to report that rider had an unbearable odor on a share ride. Summary#2: Rider hat was stolen. Summary#3: Rider exited earlier than his stop. Summary#4: Rider was no showed over-sized Wheelchair did not fit on ramp. Summary#5: Rider was harassing & abusing the driver Summary#6: Rider vomit inside vehicle
Eligibility	Cert	1945	Summary#1: Please email renewal forms to rider at kevinmilanian@sbcglobal.net. Summary#2: Mail renewal application to rider. Summary#3: email eligibility forms Summary#4: Change mobility device from walker to powered wheelchair Summary#5: Add mobility device (device was ambulatory, had stroke, now primary device is powered wheelchair and secondary device is manual wheelchair).
Customer Relations	Compliment	1358	Summary#1: Smile. Rider Aracely would like to give a smile for Oscar in CS. Summary#2: Gracious, Yizset helpful employee Summary#3: The dispatcher (Araceli) was so nice and friendly. Summary#4: Rider would like to Compliment Reservationist. Allie

			Summary#5: GPI agent was helpful and very accommodating.
Risk Management	Incident/Minor	1251	Summary#1: rider fell while entering vehicle. Summary#2: Rider fell in Olive View Medical Center Summary#3: Driver reported rider complained stating they were not feeling well and had to exit to use the restroom. 20 minutes later rider returned to vehicle. Requested to go home. Summary#4: Driver reported upon arrival she noticed someone was on the floor. Driver approached family and confirm it was the rider. They had called 911. Driver did not witness the fall. Summary#5: Rider hurt her coccyx while sitting in VEH due to metal of seat
Risk Management	Collision/Minor	1106	Summary#1: Vehicle-2 side swiped Vehicle-1, Hit & Run. Summary#2: Driver drove over tire strip. Summary#3: V1 contacted V2, while V1 was parked, insurance information exchanged Summary#4: Driver reported V1 was parked waiting for pick when V2 sideswiped V1 side mirror. Info exchanged. Summary#5: V1 went over island curb backing out of parking space, no injuries, no damage, no riders, incident at 11:30am
Customer Service	No-Show Appeal	985	Summary#1: NS Appeal for upcoming December 2025 NS Suspension. Summary#2: NS Appeal for September 2025 Summary#3: Rider's Suspension was overturned but still not update in the system. Summary#4: NS Appeal, rider informed reasons for recent no-shows.

			Summary#5: NS Appeal, being suspended 2 months in a row is not fair.
Customer Relations	Conduct	917	Summary#1: driver gave an attitude to rider. Summary#2: Driver's conduct, put his badge# on rider's face Summary#3: Driver was rude & nasty Summary#4: Conduct -SGT driver was rude and raised his voice. Summary#5: Driver speeding & misbehave.
Customer Relations	Routing	822	Summary#1: Vehicle arrive early and was poorly routed Summary#2: Poor routing, affected travel time. Summary#3: Driver passed her DO address Summary#4: Conduct -SGT driver was rude and raised his voice. Summary#5: Driver speeding & misbehave.
Customer Service	Mail Fulfillment	758	Summary#1: Please email ROI form Summary#2: Please mail out PV form to the rider at address shown on file. Summary#3: Mail a copy of the determination letter of the eligibility decision. Summary#4: send a suspension letter to rider Summary#5: Send out ATW approval letter to the rider Summary#6: Send out ATW approval letter to the rider

 - a. Complaint
 - b. Documents
 - c. Conduct Appeal
 - d. NoShow Appeal

- e. Recording
- f. Response Letter
- g. Video
- 7. Ticket can have zero or more attached tasks
 - a. Task Description
 - b. Task Response
 - c. Person Assigned
 - d. Status

Exhibit B

Preliminary User Stories and Example Conversation Flows

User Story 1: AI Ticket Entry - a Detailed Complaint

English

- **Actor:** Rider calling Access Services.
- **Story:** As a rider, I want to report a complex issue via phone, so Access Services can investigate and provide solutions.
- **Sample Dialogue:**

Algent: "Hello, thank you for calling Access Services. I am your AI Assistant. How may I assist you today?"

Rider: "I'd like to report a complaint about my driver. She was wearing a back brace and said she could not provide assistance."

Algent: "I'm sorry to hear that. Please share what assistance you needed but did not receive."

Rider: "My water bottle fell, and she couldn't pick it up. She also couldn't help me up the ramp or secure my seatbelt, and she seemed frustrated when I didn't have the correct change."

Algent: "Thank you for the details. Did the driver attempt to assist you in any way?"

Rider: "She pulled the ramp and moved my mobility device a bit, but I had to transfer myself. I'm concerned she shouldn't be assigned if she can't physically help passengers."

Algent: "I understand your concerns: lack of physical assistance, attitude, and difficulty with payment. Is there anything else you'd like to add?"

Rider: "No, that's everything."

Algent: "I've documented your complaint: The driver's physical limitation prevented her from providing assistance, and you felt unsupported during your trip. Your reference number is 29015. Would you like to speak with a human agent?"

Rider: "No, thank you."

Algent: "Thank you for sharing your experience. Access Services will review this. Have a good day."

User Story 2: General Inquiry (Voice)

English

- **Actor:** Rider or public caller.
- **Story:** As a caller, I want to ask general questions over the phone for immediate, accurate information.
- **Sample Dialogue:**

Algent: "Hello, you've reached Access Services. I am your AI Assistant. How can I help you?"

User: "What time does your service start on weekends?"

Algent: "Our service starts at 6 AM on weekends. Is there anything else I can help you with?"

User: "No, that's it."

Algent: "Thank you for calling. Have a great day."

Spanish

- **Actor:** Usuario llamando por teléfono.
 - **Historia:** Como usuario, quiero hacer consultas generales por teléfono para recibir información precisa de inmediato.
 - **Diálogo ejemplo:**

Algent: "Hola, ha llamado a Access Services. Soy su Asistente de IA. En qué puedo ayudarle?"

Usuario: "A qué hora inicia el servicio los fines de semana?"

Algent: "Nuestro servicio empieza a las 6 AM los fines de semana. Necesita ayuda con algo más?"

 - **Usuario:** "No, eso es todo."
 - **Algent:** "Gracias por llamar. Que tenga buen día."
-

User Story 3: Lost & Found Item Report (Voice)

English

- **Actor:** Rider calling by phone.
- **Story:** As a rider, I want to report a lost or found item by phone so staff can assist me in recovering it.
- **Sample Dialogue:**

Algent: "Hello, this is Access Services. I am your AI Assistant. How can I help today?"

Rider: "I lost my wallet yesterday in your vehicle."

Algent: "I'm sorry to hear that. Can you tell me the time of your ride and your driver's name?"

Rider: "It was at 4 PM, with Linda."

Algent: "Thank you. What does the wallet look like?"

Rider: "Brown leather, has my ID inside."

Algent: "I've created a ticket, reference number 87123. We will contact you if it's found. Anything else?"

Rider: "No, thank you."

Algent: "Thank you for calling. Goodbye."

User Story 4: Safety Issue or Incident (Voice)

English

- **Actor:** Rider or public calling by phone.
- **Story:** As a caller, I want to report a safety issue so it is handled promptly.
- **Sample Dialogue:**

Algent: "Hello, thank you for calling Access Services. I am your AI Assistant. Is your issue urgent or related to safety?"

Caller: "Yes, the vehicle ramp wasn't working properly last night."

Algent: "I understand. Please describe the problem in detail."

Caller: "The ramp wouldn't lock into place and wobbled when I tried to get on."

Algent: "Thank you for letting us know. I'm escalating this to our safety team. Your reference number is 99900."

Caller: "Thank you."

Algent: "If you need anything else, let us know. Goodbye."

User Story 5: Compliment Submission (Voice)

English

- **Actor:** Rider/public caller by phone.
- **Story:** As a caller, I want to give positive feedback by phone so staff/service are properly recognized.
- **Sample Dialogue:**

Algent: "Thank you for calling Access Services. I am your AI Assistant. How may I assist?"

Caller: "My driver was fantastic today – really helpful with my wheelchair."

Algent: "That's wonderful to hear! Could you share the driver's name and when your ride occurred?"

Caller: "Anna, at noon."

Algent: "Thank you. I've submitted your compliment. Your reference number is 11221. Anything else?"

Caller: "No, that's all. Thank you!"

Algent: "Thank you for calling and for your feedback. Goodbye."

User Story 6: Algent Offers to Transfer to Human Agent (Escalation/Assistance)

English

- **Actor:** Any caller.
- **Story:** As a caller, I want the option to speak with a human agent if the AI cannot resolve my issue, so I can ensure my needs are fully addressed.
- **Sample Dialogue:**

Algent: "Hello, thank you for calling Access Services. I am your AI Assistant. How can I help today?"

Caller: "I have a complex billing question that I don't think a robot can handle."

Algent: "I understand. For complex billing matters, it's best to speak with a specialist. Would you like me to transfer you to a human agent now?"

Caller: "Yes, please."

Algent: "One moment, I'll transfer you. Please have your account information ready for our representative."

Spanish

- **Actor:** Cualquier usuario llamando por teléfono.
- **Historia:** Como usuario, quiero poder hablar con un agente humano si el asistente de IA no puede resolver mi problema.
- **Diálogo ejemplo:**

Algent: "Gracias por llamar a Access Services. Soy su Asistente de IA. En qué puedo ayudarle hoy?"

Usuario: "Tengo una pregunta compleja sobre facturación que un robot no puede resolver."

Algent: "Entiendo. Para estos temas, lo mejor será hablar con un especialista. Desea que lo transfiera a un agente humano ahora?"

Usuario: "Sí, por favor."

Algent: "Un momento, lo transfiero ahora. Tenga a la mano su información de cuenta para el representante."

Exhibit C

Preliminary Technical Discussion, Diagrams and Workflows

Executive Summary

This document, **Exhibit C: Technical Discussion, Diagrams and Workflows**, provides a preliminary technical exploration and planning blueprint for the proposed Algent solution. It outlines the architectural components, including the AI Processing Layer (ASR, LLM, TTS, Session Orchestration), Integration Layer (Microsoft Dynamics 365), and the comprehensive Admin Console, Deferral Engine, and Monitoring capabilities. Key components such as Observability (Langfuse, Papertrail) and Security controls (TLS 1.3, PII Redaction, RBAC) are also detailed.

The subsequent sections contain technical diagrams and workflows illustrating the System Data Flow, Voice Interaction Flow, Latency Targets, and various operational sequences (Escalation, Failure Handling).

Crucially, the content herein represents an initial design and planning phase. All technical specifications, component selections, workflows, and latency targets are subject to change and further refinement based on the outcomes of the discovery phase, in-depth research, and final technical scoping upon project approval. This document serves as a foundational proposal for discussion and agreement.

Technical Discussion and Preliminary Approach

1. AI Processing Layer

- a. Automatic Speech Recognition : sub-800 ms streaming latency, > 75% accuracy on telephony audio.
- b. LLM –: intent detection, slot-filling, escalation scoring, bilingual generation.
- c. TTS –: natural, expressive speech.
- d. Session Orchestration – LiveKit: SIP/RTP media, VAD endpoints, session state, warm transfers.

2. Integration Layer

- a. OAuth2 REST connector to Microsoft Dynamics 365 (Tickets / Attachments / Annotations).
- b. Trip association by rider ID + datetime; ticket confirmation

3. Admin Console, Deferral Engine & Monitoring

- a. The **Admin Console** is the central hub for configuring, monitoring, and overseeing all Algent interactions across voice channels, ensuring QA compliance via **RBAC**.

4. Key Administrative Capabilities:

- a. **Configuration Management:** Access Services administrators can manage conversation flows and content without requiring engineering support.
- b. **Multilingual Support:** Manage **bilingual message libraries** (English/Spanish), including greetings, disclosures, and consent text.
- c. **Conversation Flow Control:** Define and reorder conversation steps and mark essential fields.
- d. **Channel Customization:** Adjust language, tone, and **adaptive speech tempo** boundaries based on the channel or demographic.
- e. **Compliance and Audit:** Classification thresholds (e.g., Inquiry vs. Ticketable incidents, safety escalations) are configurable and version-controlled for traceability.
- f. **Knowledge Management:** Upload, version, or retire knowledge sources (SOPs, documents) to ensure the Algent uses only current reference materials.

5. Request Redirection (Deferral Engine):

- a. The Deferral Engine allows administrators to redirect specific requests (e.g., payments, reservations) to the appropriate channel or division.

6. Monitoring & Reporting Capabilities:

- a. **Session Distribution Dashboard:** Tracks real-time session mix (*Inquiry / Ticket / Transfer*), failure escalations, completion percentage, and average duration.
- b. **QA Review Panel:** Displays transcripts, audio, and annotations; flags low-confidence or incomplete tickets; enables reviewers to reclassify or comment inline.
- c. **Comprehensive Audit Logging:** Every configuration edit, deployment, or deferral-rule change (who / when / what) is recorded in an immutable log.
- d. **Operational Log Access:** Administrators can filter and download log streams and select audio recordings for audit or training review.

7. Observability & Logging

- a. Langfuse: span tracing for ASR→LLM→TTS→Dynamics, latency histograms, confidence metrics, prompt versioning, alerts.
- b. Papertrail: centralized structured logs (session_id, trace_id, event_type, latency_ms, error_code) for live triage.

8. Security & Compliance

- a. TLS 1.3 transport; AES-256 encryption at rest; PII redaction for transcripts.
- b. RBAC¹ with Admin / QA / Viewer roles; signed expiring URLs for audio artifacts; 12-month retention.

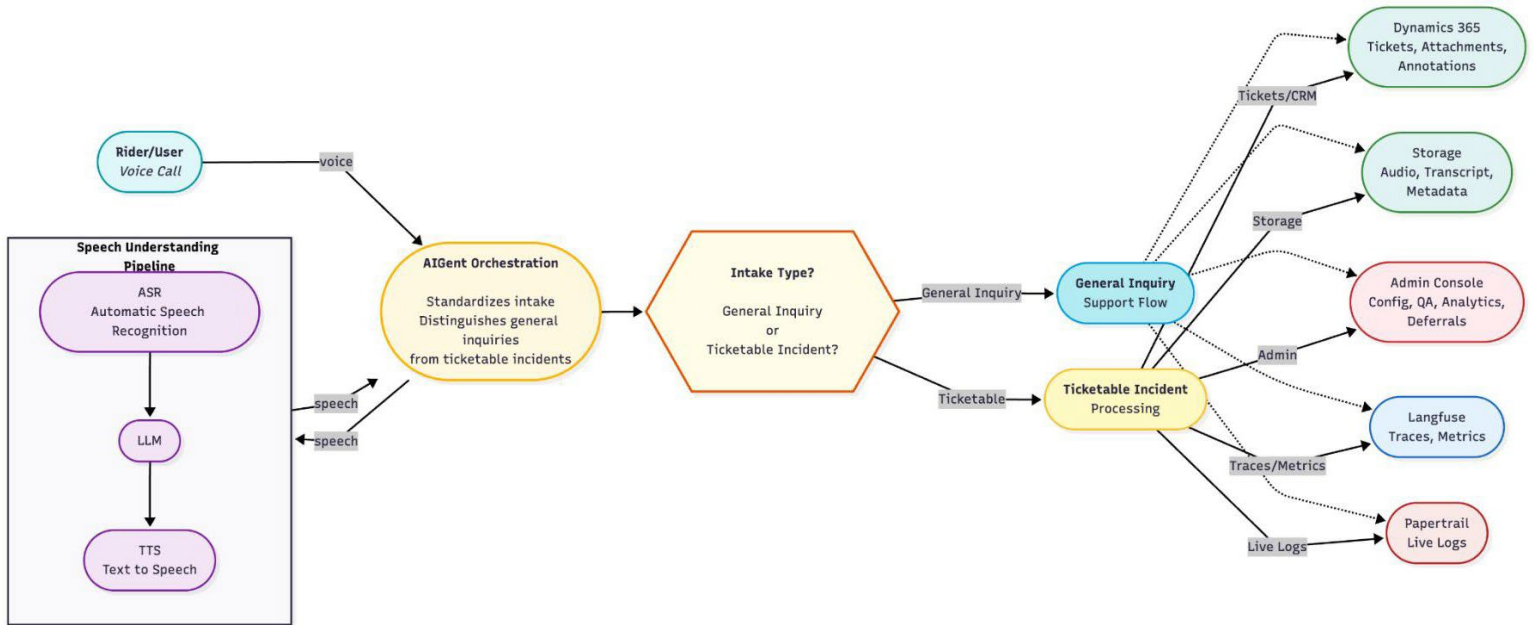

9. Deployment Environment

- a. Hosting Infrastructure will be provided by IT Curves.

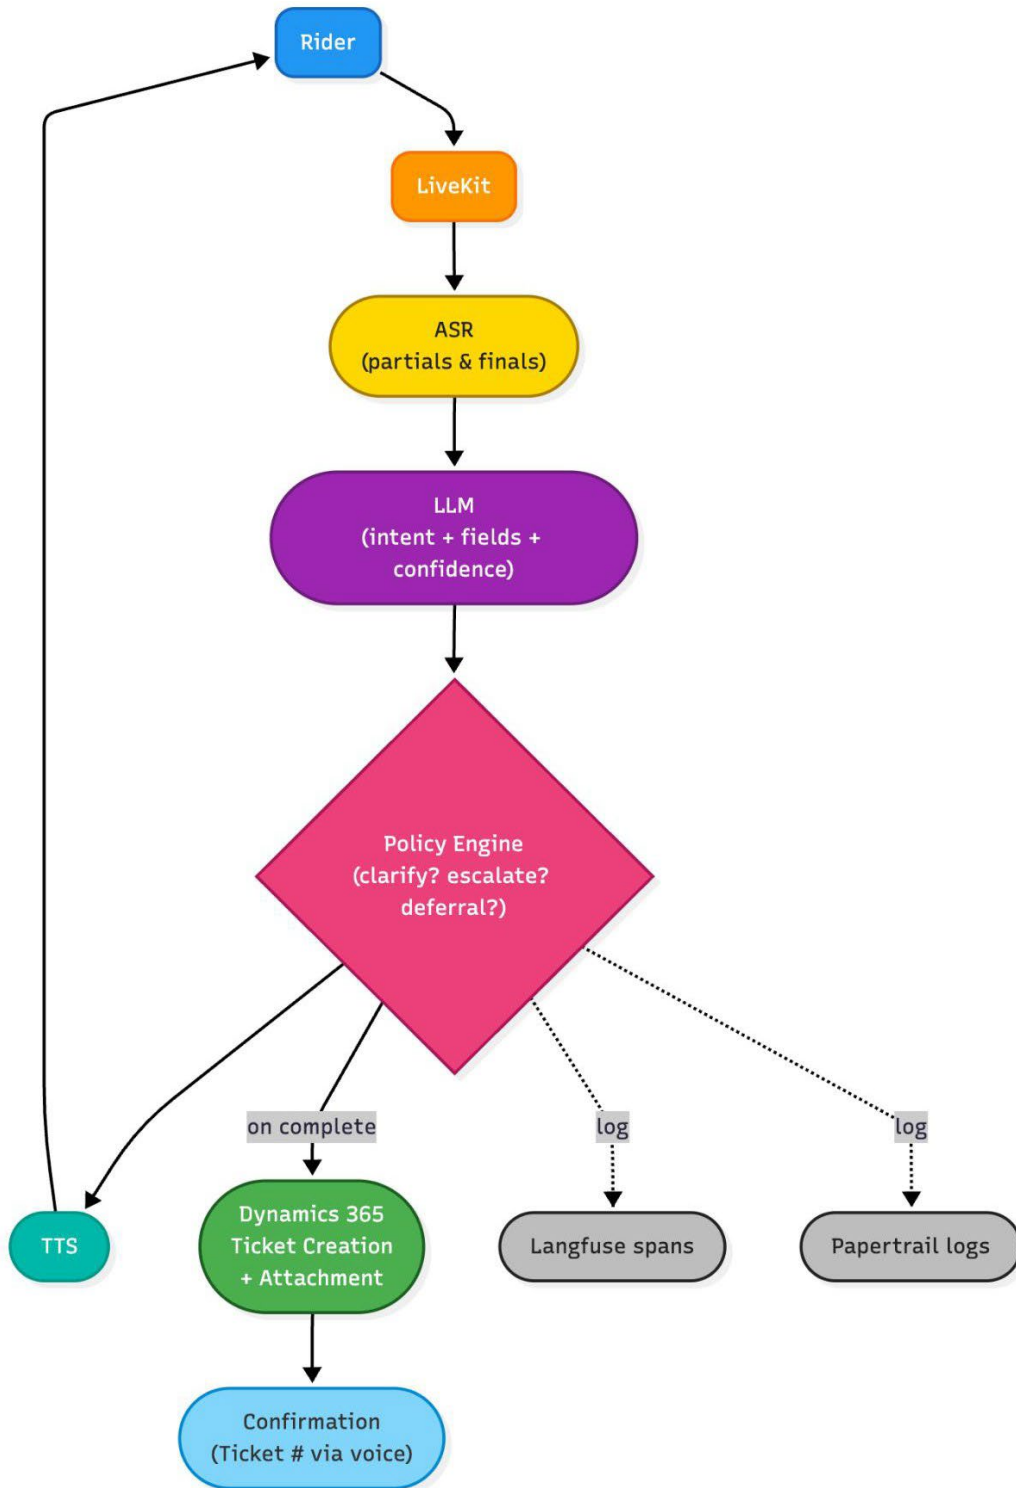

¹ RBAC (Role-Based Access Control) assigns permissions to predefined roles rather than individuals. Administrators configure and monitor components, QA Reviewers can view/annotate sessions, and Viewers access analytics only. This model strengthens compliance and least-privilege access.

Technical Diagrams and Workflow

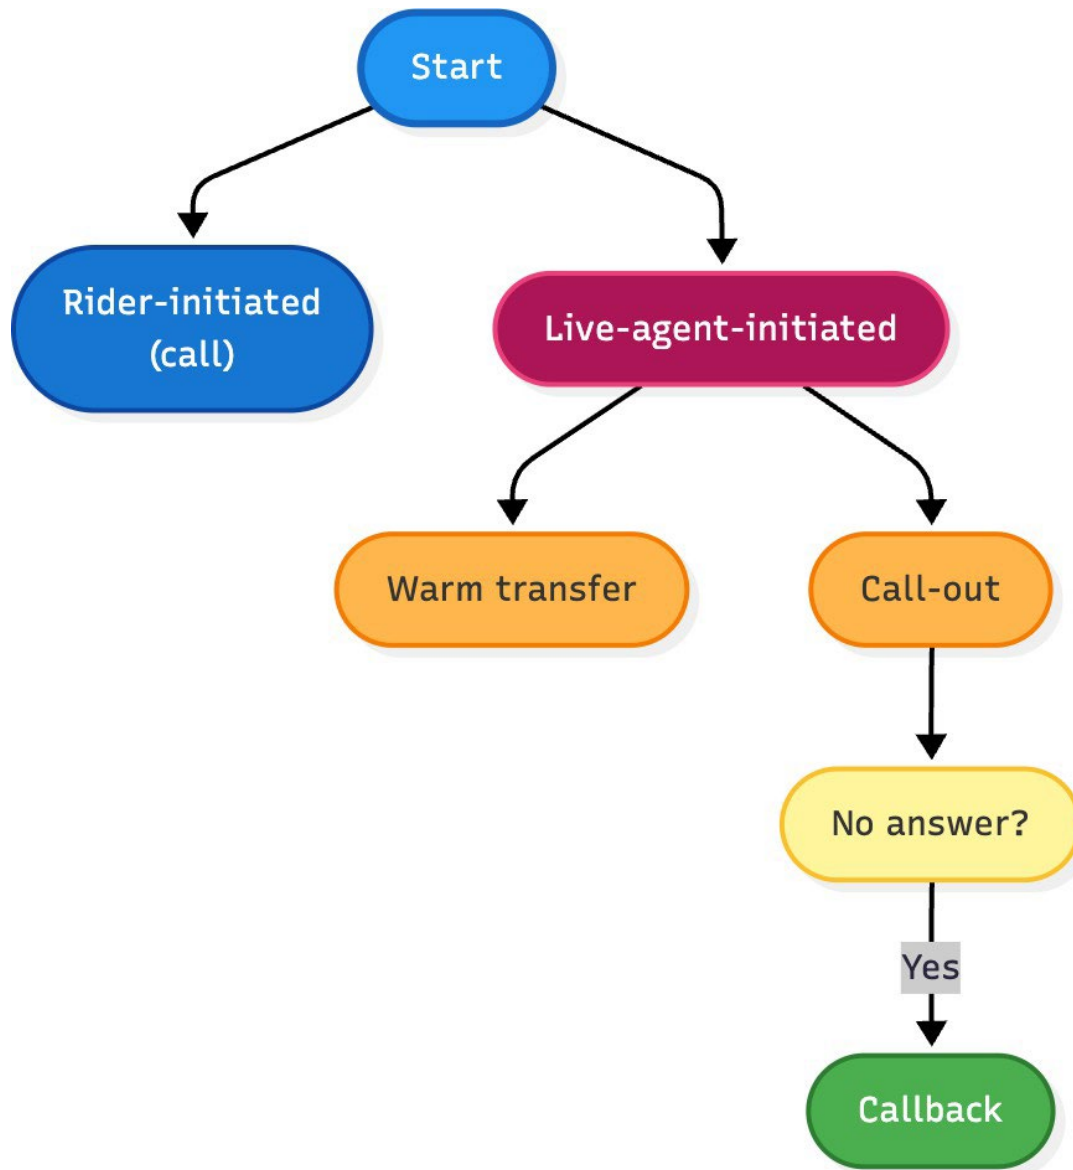

1: Context Diagram

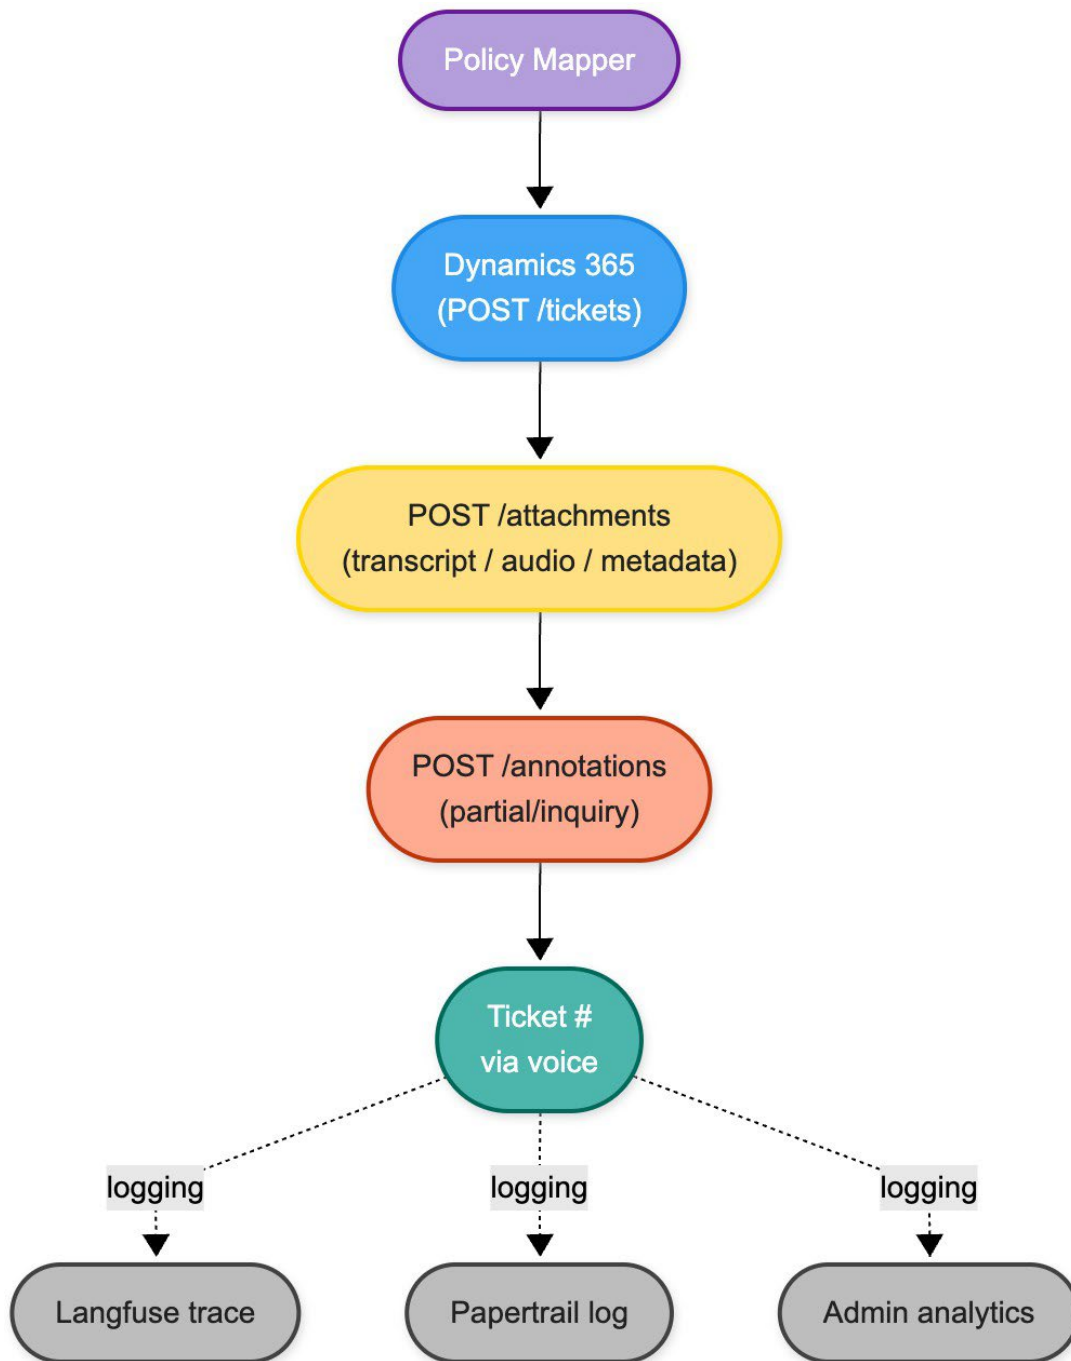

2: Voice Interaction Flow

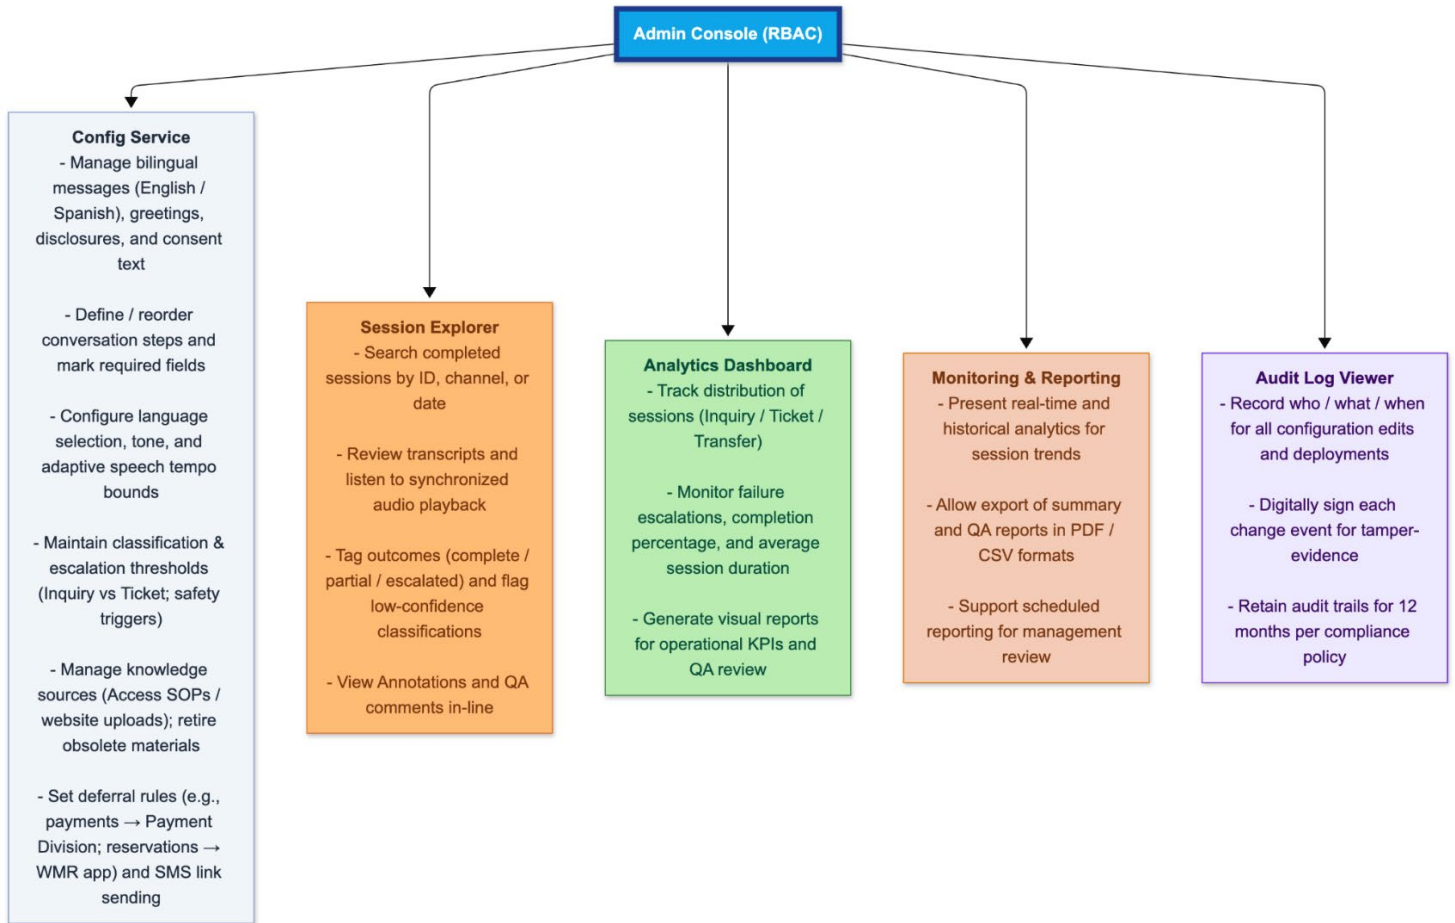

3: Session Initiation Variants

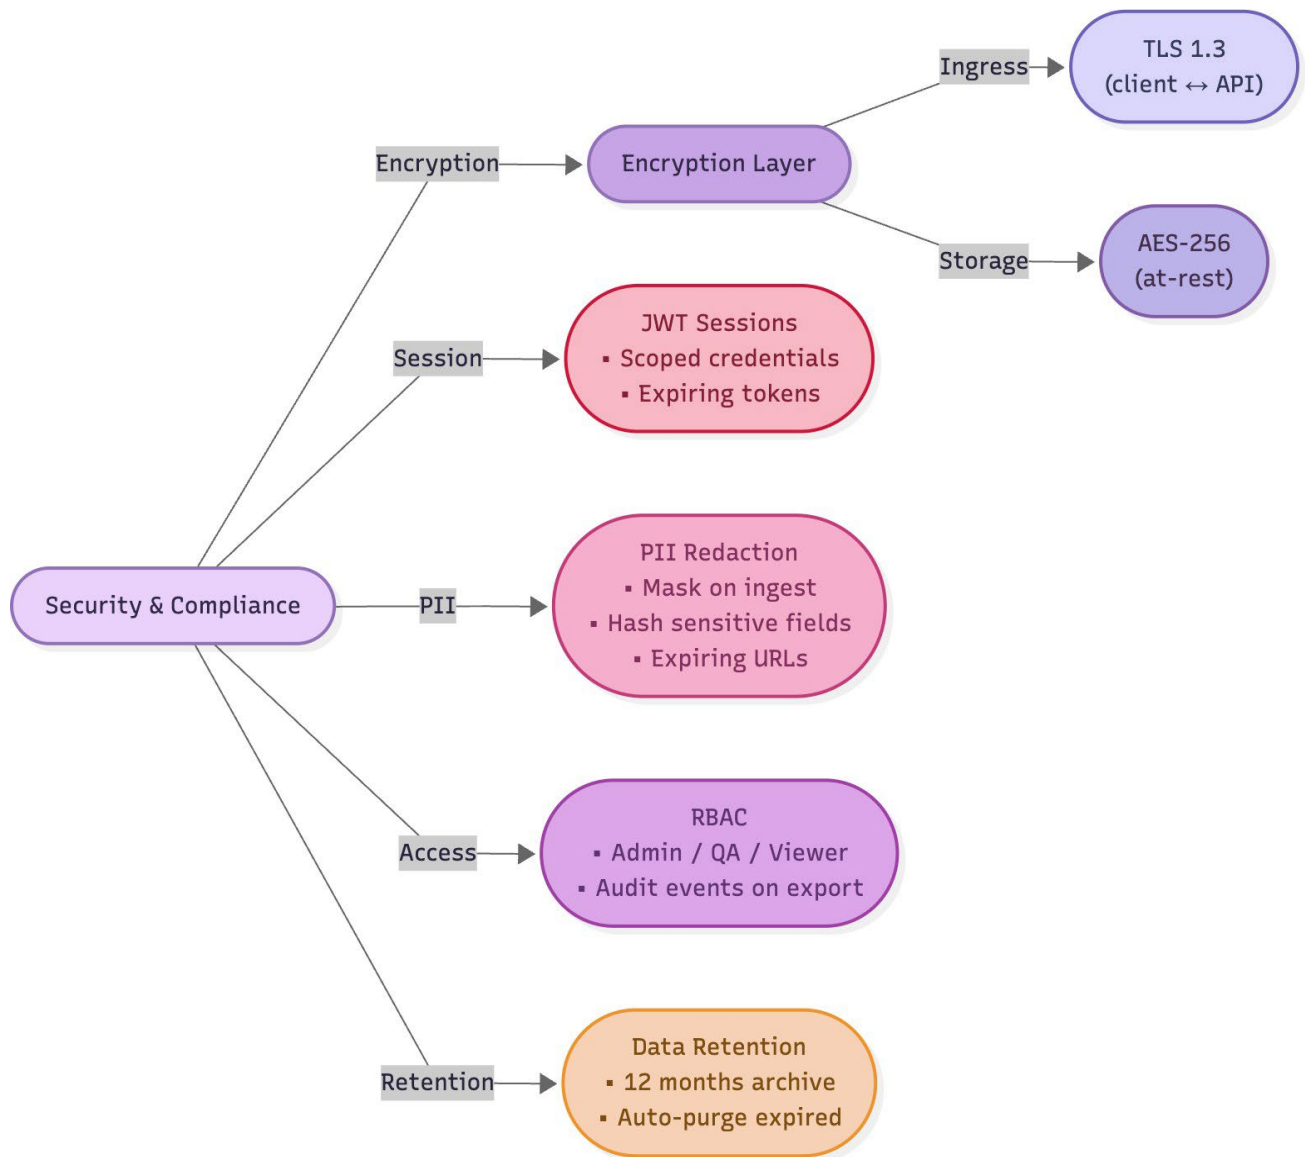

4: Ticket Creation & Post-Processing

5: Admin Console & Analytics

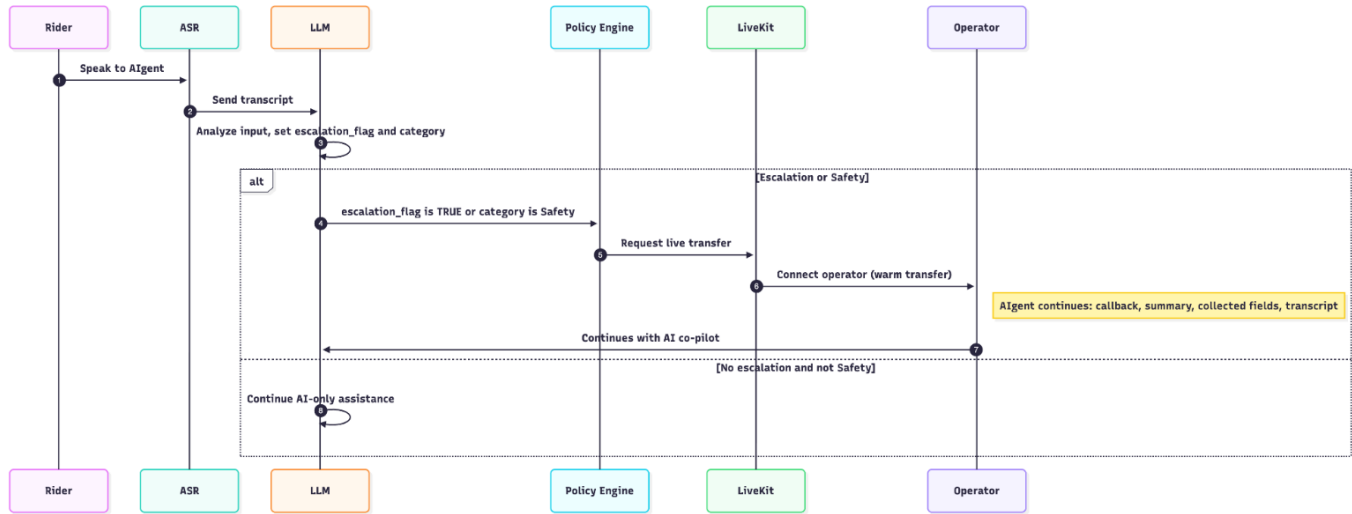

6: Security & Compliance Paths

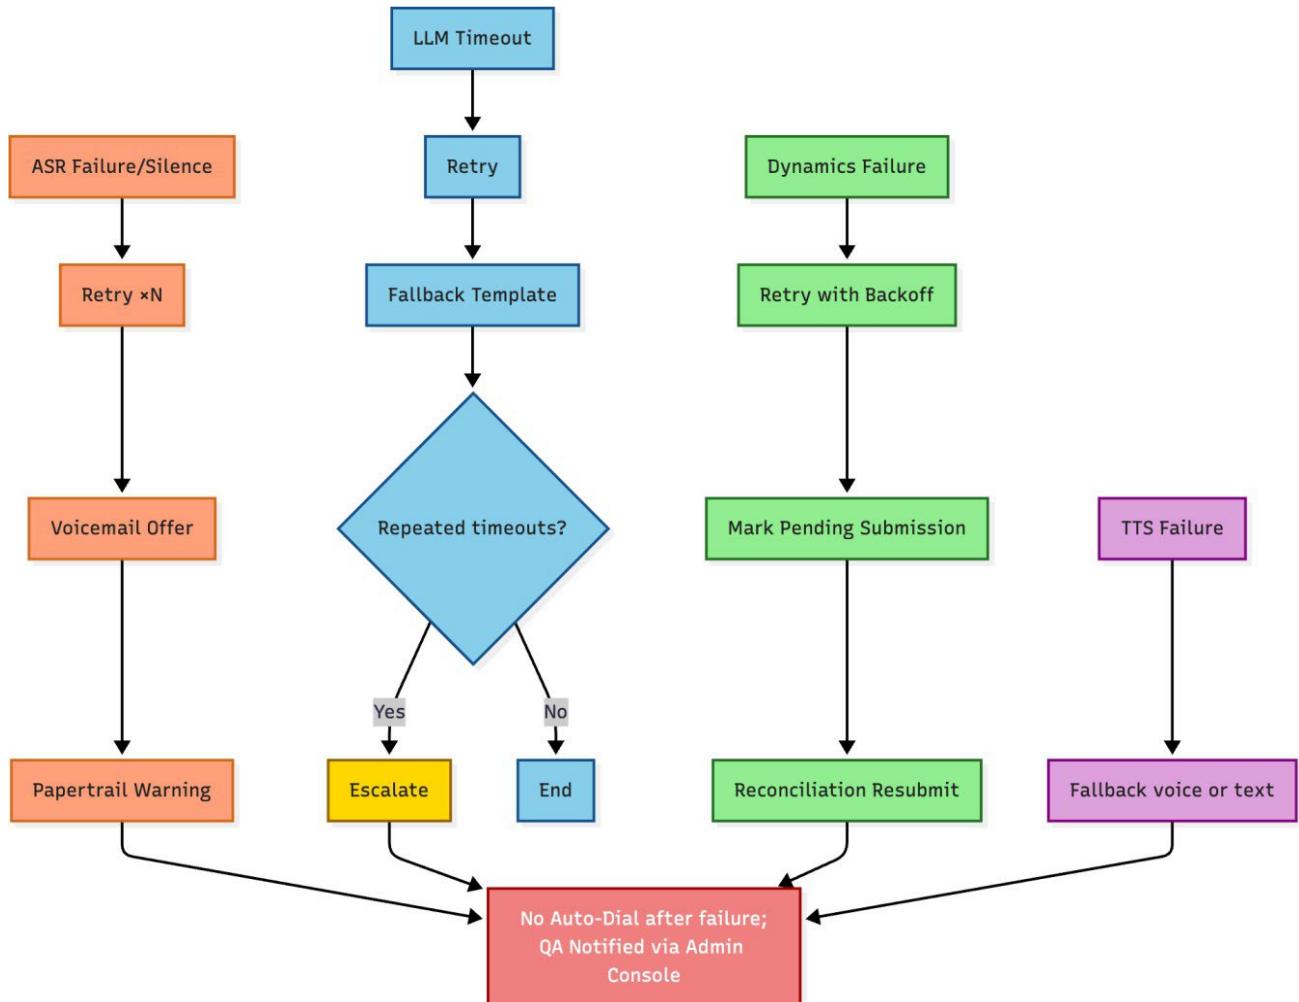

7: Latency Targets

Component	Target Latency	Notes
ASR	800 ms	Partial transcripts every 250 ms; final on VAD
LLM	300–700 ms	Token streaming; TTFT target < 900 ms (p95)
TTS	250–500 ms	Adaptive tempo; bilingual synthesis
TOTAL	≤ 2s	Average per turn (90th percentile)

9: Escalation (Exception) Sequence

10: Failure Handling Path

POST-LAUNCH SUPPORT

1. Support Period and Availability

Seller shall provide continuous post-launch support once the AI Agent is deployed to the production environment. Support shall include technical assistance, issue resolution, and performance monitoring.

2. Monitoring and Performance Management

Seller shall continuously monitor the AI Agent's performance to ensure stable operation and adherence to agreed-upon quality metrics. Monitoring activities include:

- a. Tracking system uptime and response latency
- b. Identifying anomalies, degradation, or unexpected behavior
- c. Reviewing logs and analytics dashboards for operational insights
- d. Monitoring conversation success rates, fallback rates, escalation frequency, and other metrics requested by Access

Seller shall notify Access of any critical issues (as soon as reasonably possible) that may impact customer experience or system availability.

3. Issue Resolution and Bug Fixes

Seller shall diagnose and resolve defects, errors, or malfunctions. This includes:

- a. Fixing model misclassifications, incorrect responses, or broken conversation flows
- b. Addressing integration failures with third-party systems
- c. Correcting configuration issues or system instability
- d. Implementing hotfixes for urgent production issues
- e. Repairing other issues identified by Access.

All issues shall be prioritized as requested by Access.

4. Model Optimization and Continuous Improvement

Seller shall provide ongoing optimization of the AI Agent to maintain and improve performance. Optimization activities include:

- a. Reviewing conversation transcripts and identifying improvement opportunities
- b. Updating intents, entities, and conversation flows
- c. Refining prompts, retrieval logic, or knowledge-base connections
- d. Enhancing accuracy, reducing fallback rates, and improving task completion
- e. Adjusting features as requested by Access

Seller shall propose improvements based on observed user behavior and industry best practices.

5. Knowledge Base and Content Updates

Seller shall support updates to the AI Agent's knowledge sources, including:

- a. Adding new FAQs, policies, or product information
- b. Updating outdated or inaccurate content
- c. Incorporating new workflows or business rules provided by Access

Access will supply updated content, and Seller shall implement and validate it.
