Provisions of the Agreement

This agreement is made and entered into by Information Technologies Curves, Inc. ("IT Curves" or "Provider") registered at 8201 Snouffer School Road, Gaithersburg, MD 20879 and Baltimore Water Taxi registered at 901 S Broadway, Baltimore, MD 21231 for the provision of IT Curves' software solutions.

IT Curves will provide the required products as selected in the Pricing Attachment and as described in the Product Description Attachment, as a cloud hosted solution, in which:

1. Cloud-based Software as a Service (SaaS)

Server hardware and third-party software licenses will be provided by IT Curves as required for IT Curves' product and services.

IT Curves will train and assist Customer staff to configure and setup the IT Curves software according to Customer practices and to include all Customer data.

Customer will supply all hardware, third party software licenses required to operate the workstations for its staff at its operation center as noted in Customer Furnished Items Attachment.

2. In-Vehicle Smart Devices and In-Vehicle Equipment

IT Curves will provide the software application for the driver devices, as well as the backseat payment interface modules (when applicable).

Customer will supply all in-vehicle smart devices, hard meters, holders, chargers, any other in-vehicle equipment, and wireless data plans from wireless carrier of its choice.

3. Delivery, Installation, Training and Post-Delivery Support Services

IT Curves will provide Customer with pre-delivery preparation, on-site implementation, and post-delivery support services, as defined in the Provision of Services Attachment.

4. Schedule of Delivery

IT Curves plans on delivering the products and services defined in this Agreement based on the defined schedule of delivery as agreed.

5. Contract Value & Payment

The total value of this contract includes certain one-time fees, and certain monthly recurring fees which along with payment milestones are shown in the Pricing Attachment and Schedule of Delivery Attachment.

Customer is responsible for the payment of any and all sales and/or use taxes for software and hardware shipped to customer.

6. Terms and Duration

The initial term of this Agreement is 3 months beginning on effective date of agreement. Thereafter, this Agreement will automatically be renewed monthly until terminated.

7. Limitation of Liability

IT Curves' liability is limited to any willful misconduct or negligence by its officers, employees, and agents in the installation and service of the hardware and software. Liability will be limited to actual compensatory damages only and Customer waives any claim for special damages, incidental damages, and consequential damages, including, but not limited to lost profits, interruption of business, or related expenses. Provider's total liabilities will not exceed total contract value.

8. HIPAA Compliance

IT Curves provides our clients who transport healthcare customers with tools, services, and products to facilitate compliance with HIPAA regulations. As a technology partner, IT Curves is committed to ensure the confidentiality, integrity, and availability of all protected electronic information. IT Curves meets all requirements laid out under the HIPAA regulations for administrative, physical and technical safeguards, as well as follows the policies and procedures guidelines. Upon request, a detailed HIPAA Compliance Statement is available.

Signed and effective as of the date of final signature and receipt of first payment.

Attachment: Provision of Services

The services provided by IT Curves professional technical staff include:

System Setup

1. Pre-Delivery / Customer Requirement Capture for Customization of Setup

IT Curves will review the Technical Description during conference calls and in-person with Customer staff to capture Customer's operational requirements and train and assist the Customer in configuring the features relevant to the purchased products, which may include the following: Affiliates and affiliate attributes, Drivers and Vehicles for each affiliate, system wide geographical setup including operating zones and stands, Route parameters, depots and route starts setup, Points of Interests, Usernames and Passwords, and Fare calculation rates.

Customer will provide adequate time and effort for IT Curves to obtain these requirements.

IT Curves is in no way responsible for the equipment and equipment setup on the Customer's premises, such as network, internet access, firewall, or any other on-premises equipment configuration or setup.

Delivery and Training

1. Pre-Delivery / Operation Readiness Review

At the end of the Initial Staging, our staff will demonstrate the system setup to Customer via the remote access software.

2. Training of Customer Staff

IT Curves staff will provide hands-on training for each module for up to two call center and dispatch operators, two managers, and two driver trainers. The Training may be provided online or onsite and is priced in the Pricing Attachment.

3. Network Setup

The Customer shall set up its own network, addressing, router, firewall, and anti-virus environment.

Post-Delivery Support Services

1. Phone Support

IT Curves staff provides phone support to Customer under the hosted solution agreement. Hours of phone support are between 8:00 am – 5:00 pm Eastern Standard Time Monday through Friday. Emergency Support is available 24 hours a day, 7 days a week.

Attachment: Customer Furnished Items

The following items are the responsibility of the Customer, as applicable, unless otherwise stated in the agreement:

1. Wireless smart device of Customer's choice, power chargers, and in-vehicle mounting installation hardware
2. Credit card readers
3. Credit card processing account
4. OBDII Devices
5. Wireless data plan: 1GB per vehicle per month recommended
6. Bluetooth connection devices
7. Internet connectivity in Customer office (50Mbps minimum)
8. Office network infrastructure and computer hardware for staff
9. Office computers running the following or better: Intel Core i7 Processor, 8GB RAM, and 500GB hard drive
10. Time for IT Curves to review technical description and programmatic services in timely manner
11. Time for IT Curves to perform setup
12. Office trainer to learn how to operate office software and to train Customer staff.
13. Driver trainer to learn how to operate in-vehicle software and to train Drivers.
14. Plivo account for SMS messaging (optional)

Software Subscription Sales Quote

For Baltimore Water Taxi on February 7th 2025

Estimated No. of Vehicles:

5

Estimated Volume:

1000 trips/month

Trip Dispatch Package includes these Modules:

- ✓ Call Taking
- ✓ Intelligent Dispatching
- ✓ Load and Verify
- ✓ Vehicle Live Map & Playback
- ✓ Driver App for Smart Devices
- ✓ Automatic Routing & Dispatching

Product	One-time	Recurring	Notes	
<u>Trip Dispatch Package</u>				
Tier 1 – 1 to 3500 trips	\$1,500	\$0.25	Example: At a volume of 6k trips/month, cost would be \$1,375 at an average of \$0.20 per trip, and \$0.15 per trip above that volume. Cancellations and No Shows are excluded from volume.	✓
Tier 2 – 3501 to 7000 trips	\$1000	\$0.20		
Tier 3 – 7001 to 14000 trips		\$0.15		
Tier 4 – 14001 and up		\$0.10 /trip		
<u>Route Manifest Builder</u> Advanced automatic routing and scheduling features	\$500	\$75 /mo.	Optional. Selected.	✓
<u>Digital Wallet</u>	\$500 \$250	\$50 /mo.	Optional. Selected.	✓
<u>Transigo Rider App</u>	\$500	\$0 /mo.	Optional. Selected.	✓
<u>Dock Wait-time Dashboard</u>	\$500	\$0	Optional. Not Selected.	
<u>Telephony Essentials</u> *Does not include service lines or minutes	\$2,100	\$210	Optional. Not Selected.	
<u>Maritime Routing Features</u> IT Curves currently has some of the software features required for this project but lacks Maritime features.	\$13,000 \$6,500	\$0	Route optimization for Waterways, Marine-Specific GPS & Mapping, Docking & Boarding Management, Multi-modal integration*	✓
<u>+Rider Interactivity Telephony Package</u> * Requires Plivo account for SMS texting * Requires VOIP phone line and outbound minutes	\$900	\$90	Optional. Not Selected.	
<u>+Driver Interactivity Telephony Package</u>	\$900	\$5 /veh	Optional. Not Selected.	

Selected Modules

\$8,750

\$1,025

Estimated total according to selected modules and volume of 1,000 Trips/month.

Included w/ Price • Data Hosting • Software Maintenance • Zoom Training • Phone Support 9am to 5pm Monday – Friday • 24/7 Emergency Support • Development	Additional • On-site Support and Training available @ \$250 per day/person, plus Travel and Lodging • IT Curves will include 2 Site visits at no extra charge
---	---

Stipulations

1. \$5,000 deposit due up-front to get started. The deposit amount is credited towards the one-time costs and remaining balance is credited towards the monthly subscription costs.
2. Minimum \$900 per month subscription.
3. 3% subscription increase once every 12 months.
4. Cancellations and No Shows are excluded from trip volume pricing.
5. Any modules not listed in the quote and with “Selected” are not included in pricing.

Attachment: Schedule of Delivery

The schedule below represents a typical timeframe. Actual timeframes may vary based on IT Curves and client availability, negotiations, products purchased, and client requirements.

Item	Milestone	Timeframe	Charges Due
[A]	Sign Quote and Agreement Expedited Delivery	Week 1	\$5,000 Deposit
[B]	Pre-Delivery Activities - Client provides company data and requirements (vehicles, drivers, dispatch settings, etc.) - IT Curves setup and configuration of system	Week 1-4	none

Intelligent Dispatching

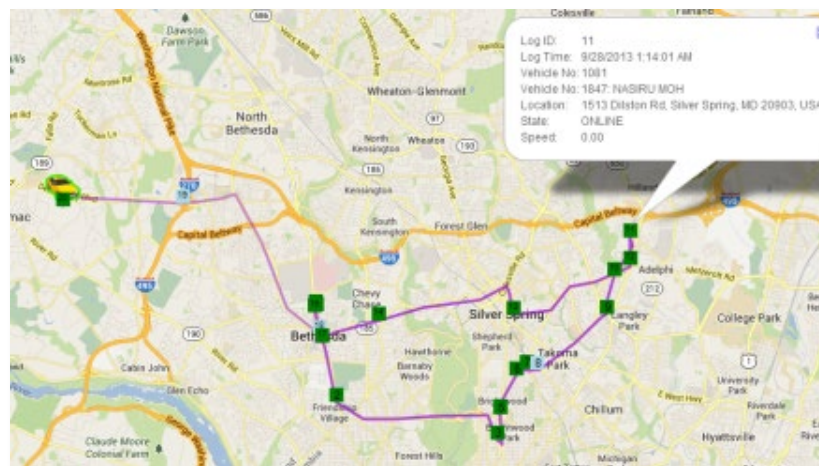

The screenshot displays the ITCURES Intelligent Dispatching software interface. The top section shows the current zone as 'LAKEF' and the processed time as '9/28/2013 9:44:32 AM'. Below this, there's a table of trip assignments with columns for TripRequestStatus, Confirmation, PickupDate/Time, Agent, Pickup/Release, Destination, and various codes. A map on the right shows the geographic area with a route highlighted. A sidebar on the right displays 'Request Status' and 'Total Passengers' for different trip types.

- Fully configurable automated system (optional), with semi-auto capabilities and manual dispatch
- Patented dispatch algorithm with multiple setup options (closest vehicle, zone & stand rank)
- Group trips into routes/manifests, individual or shared rides
- Per zone dispatch settings – every zone can be configured individually and dispatch differently
- Wall trips – drivers can self-dispatch trips
- Graphical user interface– displays process and logic of trip assignments to vehicles
- Trip Reporting
- Mini routes once built can be released for auto dispatch to send offers out to the vehicles based upon rank and distance formula
- Powerfully configurable fare calculations – by account, zone, zip-code, address

Vehicle Live Map & Playback

- Live tracking – configurable GPS reporting based on distance and/or time travelled
- Displays both vehicles and passengers
- Vehicle status (Available, Break, Occupied, Disconnected, En-route to Pickup or En-route to Drop off)
- Displays passengers on board, vehicle speed, direction
- Passengers/trip status & ETAs shown on map along with vehicle/driver dispatched to trip
- Multiple filtering and display options
- Playback by single vehicle/driver, multiple via comma separation, range or even region within a selected time frame

Driver App

Authenticate and Control Driver Access

- Only manager-approved devices
- Available for Android tablets and Phones (iPhones with some limitations)
- Choose trip data visible to driver
- Instant communication to the back office / dispatch
- Set login time restraints
- Allow limited driver breaks
- Lock and disable devices

Dispatch Trip & Route Details to Driver

- Allows for direct dispatch or a traditional bidding system
- Wall trips displays trips based on time and distance from driver location
- Displays detailed customer/trip information
- Accurate Google Maps-based navigation – turn by turn, voice guided

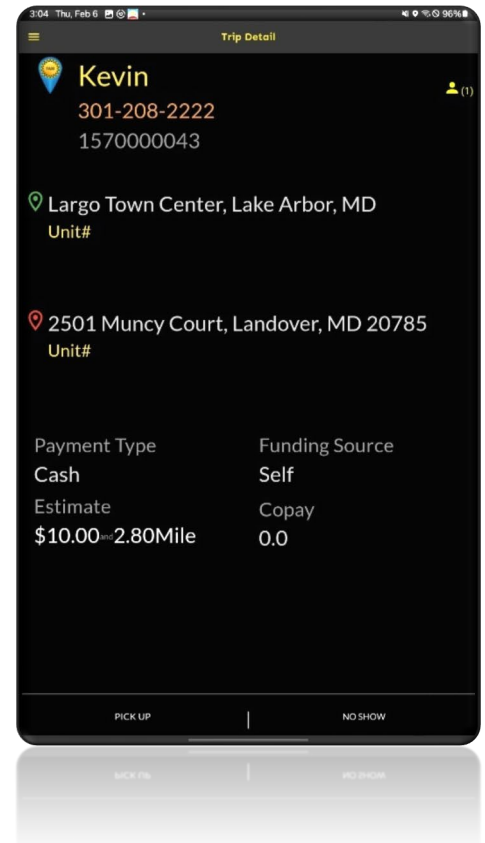

Track and Record Locations, Time Stamps and Actions

- 2-way Messaging with dispatch/management – free text or canned messages
- Passenger call-out capability when paired with IT Curves' phone system
- Instant trip updates upon no show, cancelations, and reservation changes
- Trip fare estimates
- Manifests displayed in order of stops
- Digital signature-capture capable
- Credit card & smart card processing

Useful Driver Tools

- Automatic/manual Call Out (robo-call) to customer upon driver arrival
- List of all zones and upcoming # of trips
- Audio reading of Text Messages from Dispatcher and Driver can text back
- Driver can view their daily revenue reports
- Digital Radio Communication with Dispatchers (D2D) *
- Receive (C2D) and initiate (D2C) Calls with Passengers, keeping both phone numbers private *

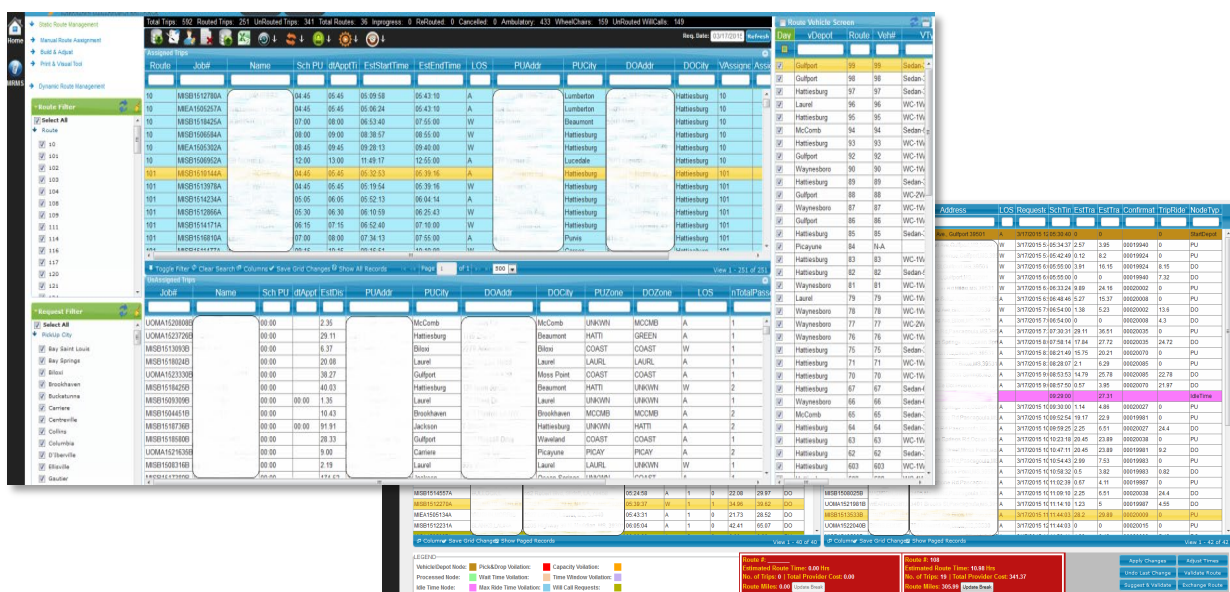

* Requires Driver Interactivity module

Route Manifest Builder

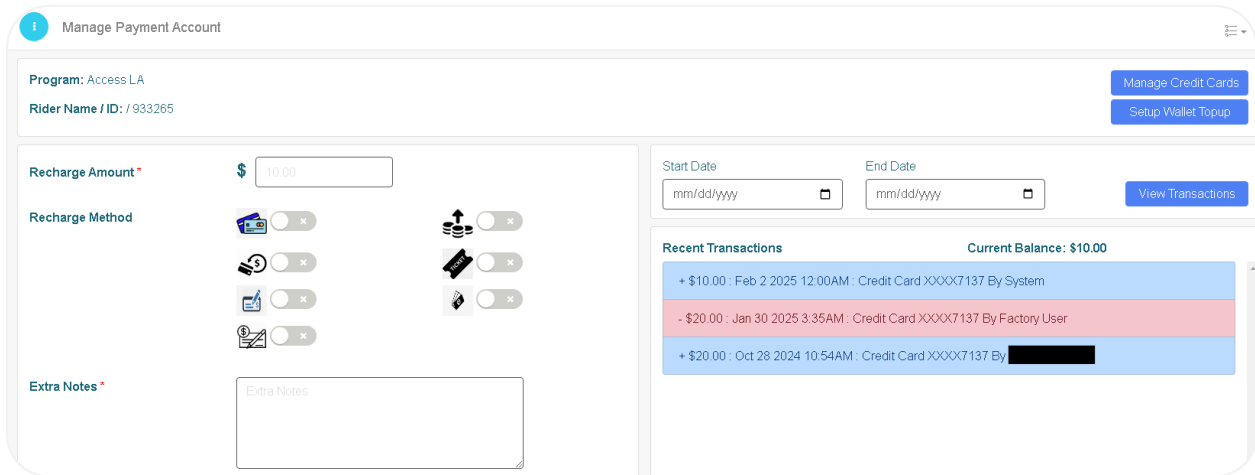

Designed to take in thousands of trips and create efficient ride sharing routes, IT Curves' Manifest Builder minimizes capital cost by using a lower number of vehicles and optimizes the operating cost by lowering driver hours.

Manifest Builder uses IT Curves' patented Efficient Ride Sharing Algorithm (ERSA) to build thousands of trips into routes using a minimal number of vehicles and lowering operating hours. ERSA optimizes the operator cost and complies with many contractual Service Level Agreements (SLA) parameters including pickup or drop off windows, maximum ride times, maximum driver hours per day, and vehicle capacity.

- **Load and Verify Trip Data**
 - bulk upload from Excel/CSV files
- Remove duplicate trips
- Edit/correct data
- Build efficient routes automatically and manually using our patented *ERSA* algorithm
- Combine trips from multiple providers
- Configurable Service Level Agreement (SLA) Constraints
- Limit driver's daily time
- Add/remove trips for in-progress routes
- Displays all routes and stops on an interactive map
- And much more...

Digital Wallet

The screenshot shows a web interface for managing a payment account. At the top, it says 'Manage Payment Account'. Below that, it displays 'Program: Access LA' and 'Rider Name / ID: / 933265'. There are buttons for 'Manage Credit Cards' and 'Setup Wallet Topup'. The main section is divided into two columns. The left column has a 'Recharge Amount' field set to '\$ 10.00', a 'Recharge Method' section with several toggle switches for different payment methods, and an 'Extra Notes' text area. The right column has 'Start Date' and 'End Date' fields, a 'View Transactions' button, and a 'Recent Transactions' table. The table shows three transactions: a \$10.00 credit on Feb 2 2025, a \$20.00 debit on Jan 30 2025, and a \$20.00 credit on Oct 28 2024. The 'Current Balance' is \$10.00.

Integrated App and Backend System

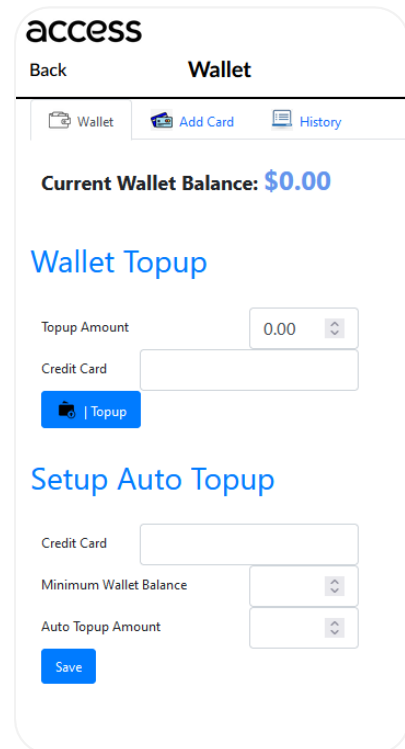

- Completely integrated between rider app and BWT system
- Add/refund funds on behalf of rider
- Automatic and Manual Top-up capabilities
- Store various cards

Easily Generate Accurate Invoices

- Setup an unlimited number of Government and Corporate accounts
- Supports different rates by different accounts
- Assess administration fees and interest
- Allows for weekly, bi-weekly or monthly invoices
- "Batch Billing" enables creating multiple invoices at the same time

Manage Account Balances

- Post receipts and payments from riders
- Reverse receipts payments
- Track late payments and overdrafts

The screenshot shows the 'access' mobile app interface for a digital wallet. At the top, it says 'access' and 'Wallet'. Below that, there are buttons for 'Back', 'Wallet', 'Add Card', and 'History'. The 'Current Wallet Balance' is \$0.00. There is a 'Wallet Topup' section with a 'Topup Amount' field set to 0.00, a 'Credit Card' field, and a 'Topup' button. Below that is a 'Setup Auto Topup' section with a 'Credit Card' field, a 'Minimum Wallet Balance' field, an 'Auto Topup Amount' field, and a 'Save' button.

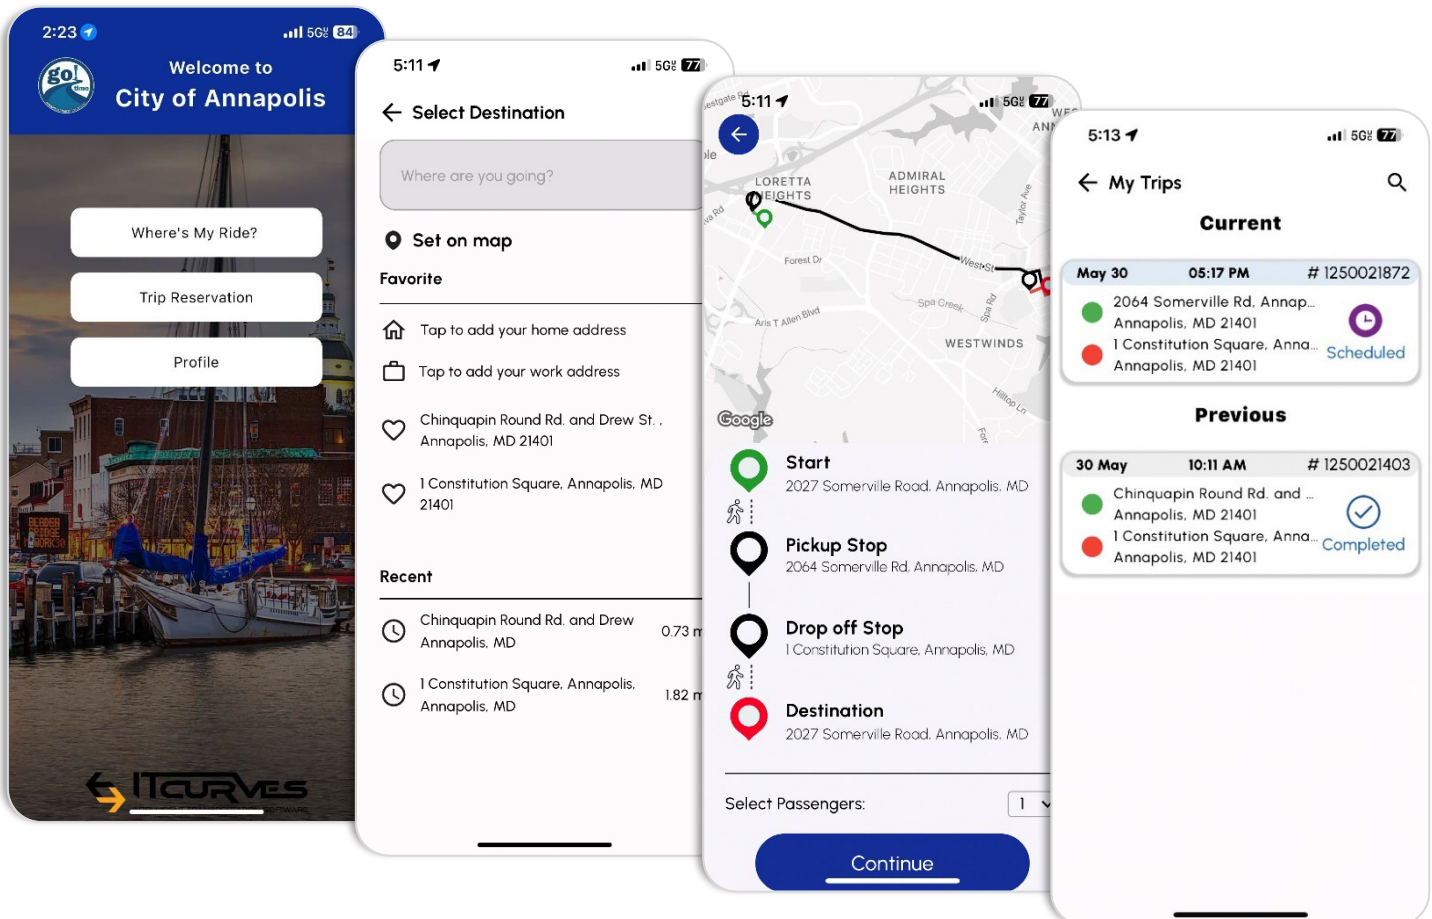

Transigo Booking Application Module

The MARS Booking App is a powerful smart phone application that connects riders to a national network of safe ground transportation services that are licensed to operate within regulations.

- Provide trip cost estimates
- Book trips instantly on demand or scheduled
- Powerful promotion options available to attract riders
- Find a cab in 60 seconds with quick booking
- View driver info and track driver to pickup with ETA
- Riders can call drivers with private Caller ID
- Pay within the app with secure credit card processing, or in-vehicle with cash or voucher/pre-paid accounts
- Book trips for friends and family
- Review trip history
- Passengers rate drivers and provide feedback
- Set your service options, company policies and regulations
- Manage your app and view statistics with your own dedicated portal

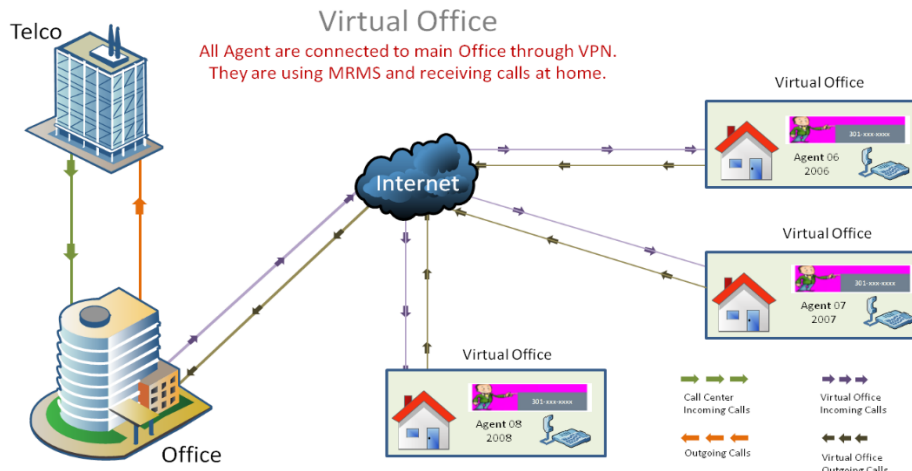

Transigo

Powered by  ITCURVES
INTELLIGENT TRANSPORTATION SOFTWARE

Telephony Essentials

All the features an office needs to receive and make calls with all the benefits and flexibility of a VoIP system.

Caller ID Popup with MRMS

When the call agent receives a call to their phone, the caller's ID will display in the MRMS software. When the agent answers the call, the caller's phone number will be automatically inserted into the Call Taking screen to pull up customer history.

Virtual Office

Receive calls anywhere in the world from any VOIP-capable phone. This can be extremely useful in the event of emergencies or any events which require your staff to work off-site.

Overflow Transferring

If call volume is high and agents are not available to answer, automatically redirect calls to an alternate phone to assist with call volume during peak call times.

Scheduled Forwarding of Calls

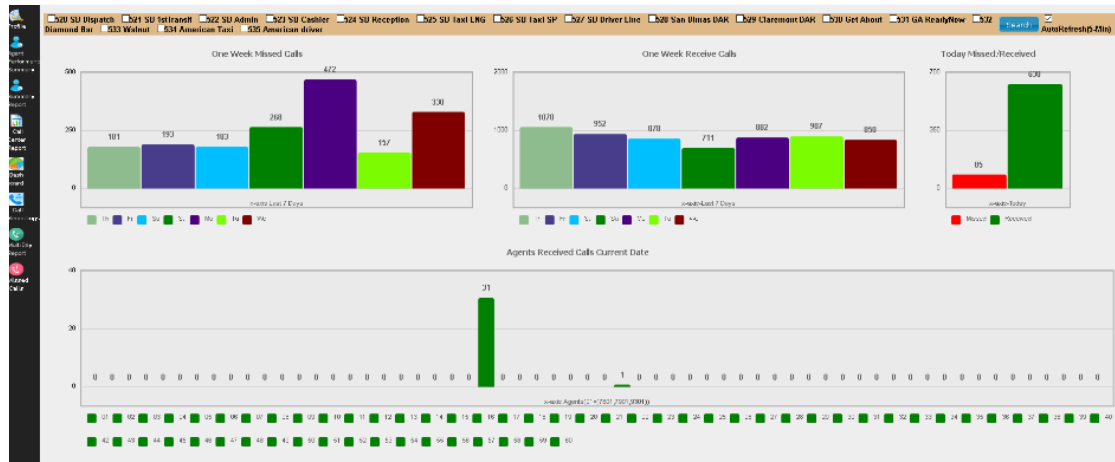

You can schedule times of day for calls to be automatically forwarded to specific phone extensions. This can be very useful for shifts where employees work from different locations or offices.

Other Features Included:

- Voicemail
- Call Transferring
- Music on Hold
- Custom company message
- Extensions set up per each desk phone
- Call recording
- Block any phone number

Management and Monitoring

Monitor your agents and call volume in real-time and review detailed statistics and call logs to manage performance using our online portal.

Live Agent Screen

Monitor all agents on duty and track their live status, hold time, missed calls, and more.

Comprehensive Telephony Reporting

View detailed historic statistics such as call volume, agent performance, and listen to and download call recordings.

- Agent live hours
- Idle time, hold time, and talk time
- Call recordings

Telephony Management Console

- Manage agents' extensions
- Manage DID's and Queues
- Manage Queue Strategy
- Manage Agent-to-Queue assignment
- Dynamic Agent-to-Extension sign on

Rider Interactivity

Automate your customer service phone calls using IT Curves' Interactive Voice Response (IVR) telephony package.

Personalize Customer's Experience

When any customer is calling in, our telephony system searches customer database and pulls customer information. Customer is greeted with a custom message based upon the customers' current state in the system i.e.

- ➔ Rider has a recently completed trip
- ➔ Rider has a booked trip waiting for dispatch or in route to pickup
- ➔ Rider has past trip history
- ➔ Rider is permitted to book trips using IVR
- ➔ Rider has future reservation

Customizable Responses and Menu Options

Managers can customize the greeting messages and adjust the available menu options and change the IVR DTM options.

IVR Booking

Our advance integrated telephony system allows the customer to book immediate rides reservation using IVR. IVR reads out the past rides unique address for the calling rider and let rider choose the pickup and drop off address from the previous addresses. This option reduces the call center load, reduces customer time over the phone and brings in accuracy of addresses.

Activate Will Calls

If the rider has a pre-booked will call, when the customer calls in, the customer can request that the trip be activated as "due now" via the IVR menu.

Automated ETA Notifications

Once trip has been booked in the system, it automatically calls out to the customer whenever trip status changes, i.e.

- Trip is dispatched to the driver
- There are forecasted delays in the trip
- Trip is marked as Cancelled

IVR-based Cancellation Option and No-Show Approval

IVR system allows riders to cancel pre-booked trips, and if the driver marks the trip a no-show, our call out notification system calls the rider to let them know and the rider is given the option to approve or disapprove the no show request or talk to the driver. This feature also reduces unnecessary load on the call center.

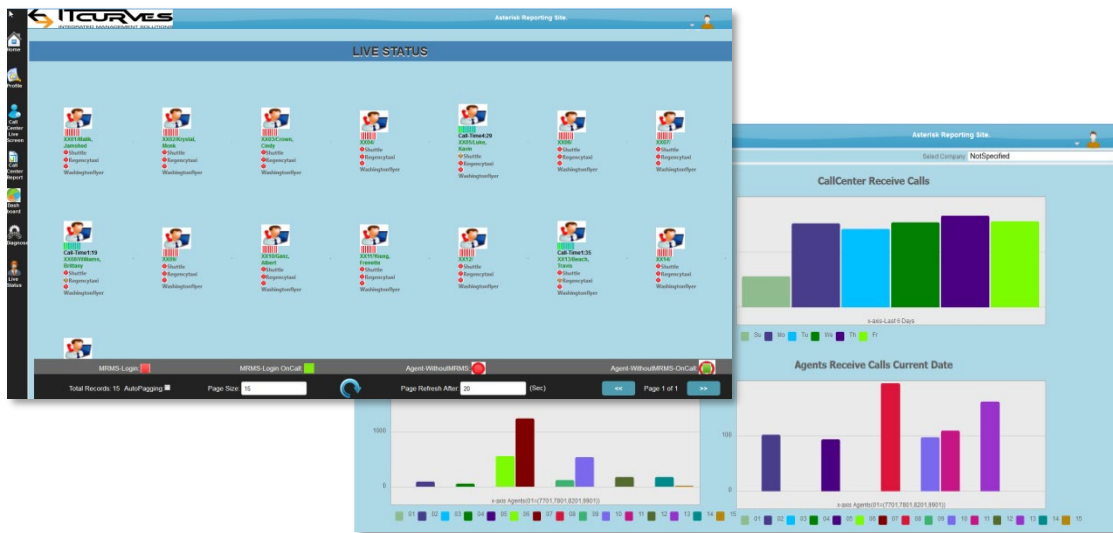

Roll Call

Call to notify the customer of their pickup time in advance. The call can be placed in advance. It lets the customer know that their trip is assigned to a driver. Tells date and time, vehicle and driver number. The company's number is displayed on the Caller ID, and you can receive a report of all roll calls. Note: This feature may include additional usage cost.

SMS Notifications

Configure automatic SMS (text message) notifications to your customers when the status of their trip changes. This feature greatly increases customer satisfaction and reduces call-backs to the call center from customers after they've reserved their ride.

Driver Interactivity

This module provides key telephony features for the Driver App and MARS Booking App, and can be used independent of IT Curves' VOIP Telephony System Essentials package.

Driver-to-Dispatcher Calling (D2D)

Drivers can push a button on their tablet to initiate Driver-to-Dispatch voice communication which will ring on dispatch agent extensions, cell phones, or soft phones. Dispatchers can also initiate calls to the driver.

Driver-to-Customer Calling (D2C)

Driver can initiate a call to the customer which will directly connect the driver with the customer while hiding both parties' phone numbers to maintain privacy. No longer must you choose between revealing your customer's contact info to or requiring your call center agents to contact the customer on your driver's behalf, freeing up your agent's time and resources.

Customer-to-Driver Calling (C2D)

With the MARS Booking App or Telephony +Rider Interactivity package, customers can conveniently contact their assigned driver directly without speaking with an agent or revealing either party's phone number.

Driver Call Out

As the driver is arriving at the pickup location, either automatically or by driver action, a robo-call will be placed to the customer. When the customer answers, they will hear a pre-recorded message informing them that their vehicle has arrived, and the driver will receive a notification that the customer has answered the call.
