

Silver Ride Software Enhancement Proposal

Overview

Silver Ride is working on enhancing its driver payroll and data analytics system to better track driver performance, trip-based revenue, and associated period data. The goal is to provide periodic data and relevant trip information, regardless of the status of the Fairmatic reporting system.

Enhancement Requirements

1. Period Recording in MRMS

Objective: Enable period tracking even when Fairmatic is disabled.

Fields:

1. Affiliate/Provider
2. Driver#
3. Period (P0, P1, P2, P3)
4. Period Start/End Times (UTC)
5. Odometer Readings (Start/End)
6. Lat/Long (Start/End)
7. Service/Trip ID.

Challenge: Ensuring that period data is accurate even with potential disruptions (e.g., driver app shutdown or lost connectivity).

2. Period Data Uploading to SFTP

Silver Ride has requested IT Curves to develop an automated service that will upload period data nightly for all markets, affiliates, and providers via the provided SFTP link.

Objective: Automate the nightly upload of period data for all drivers to a pre-configured SFTP path.

Details: To facilitate this, IT Curves will configure each provider's specific SFTP folder path and credentials. Additionally, a service will be established to run nightly at 1:00 AM, ensuring the upload of completed period data for all drivers up to midnight. The period data will be exported in either Excel or CSV format and uploaded to the designated SFTP folder, structured as: sftp://SilverRide/{Affiliate Name}/{Period Folder}/PeriodReport_mmddyyyy.csv.

The period file will include all fields as outlined in the period recording requirements. IT Curves will implement a tracking system to log the last date of uploaded data. If any period data upload is missing for a particular day, the system will automatically upload the missing file during the next execution. Each file will be uploaded individually, corresponding to a specific date.

3. AVL Data Uploading to SFTP

Silver Ride has requested IT Curves to develop an automated service that will upload AVL data nightly for all markets, affiliates, and providers via the provided SFTP link.

Objective: Automate the nightly upload of AVL data to an SFTP path.

Details: IT Curves will configure each provider's specific SFTP folder path and credentials. Additionally, a service will be created to run every night at 1:00 AM, ensuring the upload of completed AVL data for all drivers up until midnight. The AVL data will be exported in either Excel or CSV format and uploaded to the designated SFTP folder, structured as: sftp://SilverRide/{Affiliate Name}/{AVL Folder}/AVLReport_mmddyyyy.csv.

The IT Curves service will track the last date of uploaded data. If any AVL data upload is missing for a particular day, the service will automatically upload the missing report during the next execution.

Fields: Includes

1. Affiliate/Provider
2. Driver#
3. Vehicle#
4. AVL Timestamp
5. Lat/Long
6. Speed
7. Status (Occupied, Online, Offline, IRTPU)
8. others

Service: To run every night, ensuring that AVL data is uploaded for each market, affiliate, and provider.

4. Trip Data Uploading to SFTP

Objective: Automate the nightly upload of trip data to SFTP for all drivers.

Fields: Detailed fields such as Pickup/Dropoff address, Driver info, Vehicle number, Trip status, Segment price, etc.

5. Trip Data Upload Template Customization

Silver Ride has requested IT Curves to develop an automated service to upload trip data nightly for all markets, affiliates, and providers via the provided SFTP link.

Objective: Provide Silver Ride with an interface to modify the trip data upload template, allowing SilverRide staff to add/remove system fields and reorder them.

Details: IT Curves will configure each provider's SFTP folder path and credentials. Additionally, a service will be created to run every night at 1:00 AM, ensuring that trip data completed up until midnight is uploaded for all drivers. The trip data will be exported in either Excel or CSV format and uploaded to the designated SFTP folder, structured as: sftp://SilverRide/{Affiliate Name}/{Trips Folder}/TripsReport_mmdyyy.csv.

The IT Curves service will track the last date of uploaded data. If any trip data upload is missing for a particular day, the service will automatically upload the missing report during the next execution. Each file will be uploaded individually, corresponding to a specific date.

Service: An interface will be created to facilitate modifications to the export template for future uploads.

Trip data upload file will include following fields.

Export Template Field Name	Order	Data Type	Max Length	System Field
attribute	1	varchar	100	Attribute
affiliate	2	varchar	100	Affiliate
pickupdatetime	3	datetime	0	Pickup Time & Date
assigneddriver	4	varchar	100	AssignedDriver#
drivername	5	varchar	100	DriverName
confirmation	6	varchar	100	Confirmation #
mvroute	7	varchar	100	MVRoute#
status	8	varchar	100	Status
cancelreasoncode	9	varchar	100	CancelReasonCode
providercost	10	decimal	0	ProviderCost
segmentprice	11	decimal	0	SegmentPrice
estimateddistance	12	decimal	0	EstimatedDistance
atlocationtime	13	time	0	AtLocationTime
actualputime	14	time	0	ActualPUTime
appttime	15	time	0	ApptTime
actualdrop	16	time	0	ActualDropOffDateTime
pickupperson	17	varchar	100	PickupPerson
pickuptime	18	time	0	Pickup Time
pickupaddress	19	varchar	100	Pickup Address
dropoffaddress	20	varchar	100	DropOff Address
fundingsource	21	varchar	100	Funding Source
estimatedcost	22	decimal	0	EstimatedCost
irequestaffiliateid	23	int	0	iRequestAffiliateID
segmentnumber	24	int	0	SegmentNumber
pustopnumber	25	int	0	PUSStopNumber

dostopnumber	26	int	0	DOSTopNumber
segmentmiles	27	decimal	0	SegmentMiles
totalpassengers	28	int	0	TotalPassengers
totaldrivernet	29	decimal	0	TotalDriverNet
pickupcity	30	varchar	100	Pickup City
dropcity	31	varchar	100	Drop City
pickupstate	32	varchar	100	Pickup State
dropstate	33	varchar	100	Drop State
pickupzip	34	varchar	100	Pickup Zip
dropzip	35	varchar	100	Drop Zip
actualdroppedlatitude	36	decimal	0	ActualDroppedLatitude
actualpickuplatitude	37	decimal	0	ActualPickupLatitude
actualdroppedlongitude	38	decimal	0	ActualDroppedLongitude
actualpickuplongitude	39	decimal	0	ActualDroppedLongitude

Requirement 5: Trip data upload file templating

SilverRide is requesting IT Curves to provide an ability to modify trip data upload template. IT Curves will provide an interface to SilverRide, from which SilverRide staff will be able to add or remove system fields to the export file.

Objective: Provide Silver Ride with an interface to modify the trip data upload template, allowing SilverRide staff to add/remove system fields and reorder them.

Service: An interface will be created to facilitate modifications to the export template for future uploads. Currently MRMS has interface where export templates can be defined and field orders can be changed; new fields can be added or removed. IT Curves will create default template with specific name and configure the service to use that template for upload purposes. SilverRide staff will be able to utilize that template to make changes for future uploads.

Work Breakdown Structure (WBS)

Task	Week/Day	Duration	Dependencies
1. Requirement Analysis	Day 1 - Day 3	3 days	-
2. Period Data Recording Enhancement	Week 1	2 days	Requirement Analysis
3. Period Data Upload to SFTP	Week 2	2 days	Requirement 2
4. AVL Data Upload to SFTP	Week 2	1 days	Requirement 3
5. Trip Data Upload to SFTP	Week 2	2 days	Requirement 4
6. Trip Data Upload Template Customization	Week 3	0 days	Requirement 5
7. Testing and Validation	Week 3	1 days	All tasks above
8. Final Implementation and Go-live	Week 3	1 days	Testing and Validation

Module	One-time	One-time Discount	One-Time Net Amount
<u>Period Data</u>			
- Reporting period data to ITC system - Provide additional information - Report downloads in back office - Report upload to sftp	\$2000.00	\$500.00	\$1,500.00
<u>AVL Data Upload Service</u>			
- Create AVL data upload template - Create service to upload the AVL data automatically to sftp for all client - Add configuration in the system to provide sftp location	\$1000.00	\$250.00	\$750.00
<u>Trip Data Upload Service</u>			
- Create Trip data upload template - Allow users to modify the upload template per region - Create service to upload trip data automatically to sftp for all client - Configure the periodicity i.e., every night or weekly - Add configuration in the system to provide sftp location	\$1500.00	\$375.00	\$1,125.00
Total	\$4,500.00	\$1,125.00	\$3,375.00

Included w/ Price:

- Setting up test environment
- Test & verification on staging environment with Momentum.
- Production rollout and verification
- Training over the phone

* Delivery Date: 4 weeks from proposal acceptance

* Confirmation and approval email will be considered as agreement sign

* Onetime fee due prior to delivery

- 50% on signing
- 25% on completion of verification in test environment
- 25% on delivery in production
